Amphibians - a Field Guide

Black-eyed Frog

Black-eyed Frog

Amphibians are cold-blooded animals that live both on land and in water. They have a unique life cycle that includes a larval stage in water and a terrestrial stage on land.

1. **Classification:** Black-eyed Frogs belong to the family Pelodytidae and the genus Pelodytes. They are found in the southeastern United States, particularly in the Florida Everglades and surrounding areas.
2. **Physical Features:** Black-eyed Frogs are small, stocky amphibians with a light-colored body and dark spots. They have a prominent dark eye and a small mouth.
3. **Life Cycle:** Black-eyed Frogs are oviparous, meaning they lay eggs. The eggs are laid in water and develop into larvae. The larvae are aquatic and have a long life span, often surviving in the water for several years before reaching the terrestrial stage.
4. **Behavior:** Black-eyed Frogs are nocturnal and are active at night. They are known for their loud, croaking calls, which are used to attract mates and defend territory.
5. **Conservation:** Black-eyed Frogs are considered a threatened species due to habitat loss and pollution. Conservation efforts are being made to protect their natural habitat and ensure their survival.
