Stem cuttings: It involves taking a section of stem from a parent plant and manipulating it to create a new plant.

leaf cuttings: stem cutting produces new roots, and a root cutting produces new stems

root cuttings: the portion of root is cut from a parent plant (often called a mother plant), placed in a growing medium, and then left to grow its own system of roots and stems.

seeds: is the method of plant propagation (multiplying, reproducing, or breeding new plants) that is done through the use of seeds.
