**Device Neutrality** Jan Krämer, Richard Feasey, 2021-06-08 Since the net neutrality debate began in the early 2000s the internet ecosystem has evolved and European policymakers now face a different type of gatekeeper This CERRE Tech Media Telecom report identifies the main competitive bottlenecks and discusses whether the key pillars of net neutrality regulation openness non discrimination and transparency should also apply to certain types of devices such as smartphones and laptops Assuming that smartphones are likely to be the first choice for consumers accessing the internet and that they are therefore a crucial element of the internet access value chain the authors of the CERRE report make concrete suggestions focusing on operating systems app stores and browsers Crucially the policy objective should be to enable consumers to bypass gatekeepers and access content via multiple channels but not neutrality in the narrow sense said Jan Kr mer co author of the report and CERRE Academic Co Director Non neutral conduct is important for innovation investment security and privacy In light of existing EU regulation specifically the Platform to Business P2B Regulation and the Digital Markets DMA and Digital Services DSA Acts the report makes a number of recommendations aiming to ensure openness non discrimination and transparency when accessing the internet on mobile devices More accessible and less discriminatory app stores As they represent a gateway for consumers to access other content and apps the authors Jan Kr mer and Richard Feasey make several policy recommendations for app stores that aim to strike a balance between mitigating the competitive gatekeeper advantage and maintaining the user convenience offered by pre installed apps These include Enabling alternative app stores to be easily installed on devices including by requiring the pre installed app stores to host rival app stores with independent payment systems Unbundling the dominant app store from other apps Banning self preferencing of apps in app stores or browsers Careful consideration of how the transparency and redress mechanisms for dominant app stores under P2B DMA and DSA obligations may interact when imposed concurrently In important areas including app stores and browsers our recommendations build upon but go further than the obligations under the P2B regulation and the foreseen obligations under the DMA and DSA Richard Feasey co author of the report and CERRE Senior Advisor Openness transparency and data portability for operating systems As third parties may face

discriminatory access to operating system OS functionality or system resources as well as limited browser functionality on an OS CERRE makes four main suggestions to improve competition and choice Enabling side loading of apps in dominant operating systems such that consumers can install any lawful and safe app on their device More stringent user consent rules for pre installed apps to align them with the consent required for apps that are installed later the same access privileges for both pre installed and alternative apps and the possibility to truly de install pre installed apps Transparency obligations on interfaces APIs for third party app developer access to operating systems and minimum notice periods in case those interfaces are changed The right to data portability as well as codes of conduct and common interfaces for devices so that consumers can switch from one device operating system to another as smoothly as possible By intervening at the operating system and app discovery layer to ensure access to alternative content the Commission can foster fairer competition in the internet access value chain without hindering innovation investment and the European principles of consumer safety and security Jan Kr mer The report was presented and debated on Tuesday 8 June 14 00 CEST during the CERRE public webinar Device neutrality regulating mobile devices      *Mobile App Development (IOS/Android) Course* Brian Smith, This comprehensive Mobile App Development course covers the fundamentals of iOS and Android app development providing a detailed exploration of both platforms The course begins with an introduction to the basics of mobile app development and then moves on to setting up the development environment using Xcode for iOS and Android Studio for Android The course covers crucial topics such as mobile app design utilizing UI UX principles for both iOS and Android platforms and implementing responsive design Furthermore students will learn Swift programming for iOS and Java and Kotlin for Android app development The course dives into project planning and management user authentication and security working with APIs and web services database management testing and debugging mobile apps publishing and monetizing apps and analyzing user feedback Additionally it explores cross platform development using React Native and discusses future trends in mobile app development such as AI IoT integration and AR VR development The course concludes by suggesting next steps for refining app development skills and exploring advanced topics while also highlighting potential career opportunities in mobile app development
