Nonparametric Functional Estimation and Related Topics G.G Roussas, 2012-12-06 About three years ago an idea was discussed among some colleagues in the Division of Statistics at the University of California Davis as to the possibility of holding an international conference focusing exclusively on nonparametric curve estimation The fruition of this idea came about with the enthusiastic support of this project by Luc Devroye of McGill University Canada and Peter Robinson of the London School of Economics UK The response of colleagues contacted to ascertain interest in participation in such a conference was gratifying and made the effort involved worthwhile Devroye and Robinson together with this editor and George Metakides of the University of Patras Greece and of the European Economic Communities Brussels formed the International Organizing Committee for a two week long Advanced Study Institute ASI sponsored by the Scientific Affairs Division of the North Atlantic Treaty Organization NATO The ASI was held on the Greek Island of Spetses between July 29 and August 10 1990 Nonparametric functional estimation is a central topic in statistics with applications in numerous substantive fields in mathematics natural and social sciences engineering and medicine While there has been interest in nonparametric functional estimation for many years this has grown of late owing to increasing availability of large data sets and the ability to process them by means of improved computing facilities along with the ability to display the results by means of sophisticated graphical procedures

Risk Management: The State of the Art Stephen Figlewski, Richard M. Levich, 2012-12-06 Very often we associate the dawn of modern financial theory with Harry Markowitz who in the 1950s introduced the formal mathematics of probability theory to the problem of managing risk in an asset portfolio The 1970s saw the advent of formal models for pricing options and other derivative contracts whose primary purpose was also financial risk management and hedging But events in the 1990s made it clear that effective risk management is a critical element for success and indeed for long term survival not only for financial institutions but also for industrial firms and even for nonprofit organizations and governmental bodies These recent events vividly show that the world is filled with all manner of risks and so risk management must extend far beyond the use of standard derivative instruments in routine hedging applications The articles in this volume cover two broad themes One theme emphasizes methods for identifying modeling and hedging specific types of financial and business risks Articles in this category consider the technology of risk measurement such as Value at Risk and extreme value theory new classes of risk such as liquidity risk new financial instruments and markets for risk management such as derivative contracts based on weather and on catastrophic insurance risks and finally credit risk which has become one of the most important areas of practical interest for risk management The second theme stresses risk management from the perspective of the firm and the financial system as a whole Articles in this category analyze risk management in the international arena including payment and settlement risks and sovereign risk pricing risk management from the regulator s viewpoint and risk

management for financial institutions The articles in this volume examine the State of the Art in risk management from the standpoint of academic researchers market analysts and practitioners and government observers Practical
