E - Learning Modules Dan Ryan, 2012-06-20 The term e Learning is a neologism for CSCL systems that came about during the emergence of website e learning modules From an e learning perspective conventional e learning systems were then based on instructional packets which were delivered to students using assignments Assignments were evaluated by the instructor In contrast the new e learning places increased emphasis on social learning and use of social software such as blogs wikis podcasts and virtual worlds such as Second Life This phenomenon has also been referred to as Long Tail Learning E learning by contrast to e learning systems not based on CSCL assumes that knowledge as meaning and understanding is socially constructed Learning takes place through conversations about content and grounded interaction about problems and actions Advocates of social learning claim that one of the best ways to learn something is to teach it to others However it should be noted that many early online courses such as those developed by Murray Turoff and Starr Roxanne Hiltz in the 1970s and 80s at the New Jersey Institute of Technology courses at the University of Guelph in Canada the British Open University and the online distance courses at the University of British Columbia where Web CT now incorporated into Blackboard Inc was first developed have always made heavy use of online discussion between students Also from the start practitioners such as Harasim in 1995 have put heavy emphasis on the use of learning networks for knowledge construction long before the term e learning let alone CSCL was even considered There is also an increased use of virtual classrooms online presentations delivered live as an online learning platform and classroom for a diverse set of education providers such as Minnesota State Colleges and Universities and Sachem MN School District In addition to virtual classroom environments social networks have become an important part of e learning Social networks have been used to foster online

learning communities around subjects as diverse as test preparation and language education Mobile Assisted Language Learning MALL is a term used to describe using handheld computers or cell phones to assist in language learning Some feel however that schools have not caught up with the social networking trends Few traditional educators promote social networking unless they are communicating with their own colleagues DLR Associates consulting group first became interested in e learning modules at the annual Distance Learning Conference held at the University of Maine I decided to offer e learning services since we were already evolved with computer assisted education techniques DLR Associates had been involved with CAE since computers were first used in engineering education It was our hope a trend could be started towards blended learning services where computer based activities were integrated with practical or classroom based situations Dan Ryan Professor Emeritus Clemson University Fundamentals of Technical Graphics Edward E. Osakue,2018-08-03 Fundamentals of Technical Graphics concentrates on the main concepts and principles of technical graphics The book is divided into two volumes volume one contains chapters one to five whereas volume two comprises of chapters six to ten Volume one covers the topics of drafting guidelines free hand sketching computer design drafting CDD systems geometric and shape construction and standard multiview drawing creation Volume two treats the topics of auxiliary views section views basic dimensioning isometric drawings and working drawings The appendices provide introductory discussions about screw fasteners general and geometric tolerancing and surface quality and symbols The book is written with current drafting standards of American National Standards Institute American Society for Mechanical Engineers ANSI ASME in mind The style is plain and discussions are straight to the point Its principle goal is meeting the needs of first and second year students in engineering engineering technology design technology and related disciplines **Principles and Practice An Integrated Approach to Engineering Graphics and AutoCAD 2017** Randy Shih,2016-06 Principles and Practices An Integrated Approach to Engineering Graphics and AutoCAD 2017 combines an introduction to AutoCAD 2017 with a comprehensive coverage of engineering graphics principles By adopting this textbook you will no longer need to adopt separate CAD and engineering graphics books for your course Not only will this unified approach give your course a smoother flow your students will also save money on their textbooks What s more the tutorial exercises in this text have been expanded to cover the performance tasks found on the AutoCAD 2017 Certified User Examination The primary goal of Principles and Practices An Integrated Approach to Engineering Graphics and AutoCAD 2017 is to introduce the aspects of engineering graphics with the use of modern Computer Aided Design Drafting software AutoCAD 2017 This text is intended to be used as a training guide for students and professionals The chapters in the text proceed in a pedagogical fashion to guide you from constructing basic shapes to making complete sets of engineering drawings This text takes a hands on exercise intensive approach to all the important concepts of Engineering Graphics as well as in depth discussions of CAD techniques This textbook contains a series of twelve chapters with detailed step by step tutorial style lessons designed to
