Bioinformatics Algorithms Miguel Rocha, Pedro G. Ferreira, 2018-06-08 Bioinformatics Algorithms Design and Implementation in Python provides a comprehensive book on many of the most important bioinformatics problems putting forward the best algorithms and showing how to implement them. The book focuses on the use of the Python programming language and its algorithms which is quickly becoming the most popular language in the bioinformatics field. Readers will find the tools they need to improve their knowledge and skills with regard to algorithm development and implementation and will also uncover prototypes of bioinformatics applications that demonstrate the main principles underlying real world applications. Presents an ideal text for bioinformatics students with little to no knowledge of computer programming. Based on over 12 years of pedagogical materials used by the authors in their own classrooms. Features a companion website with downloadable codes and runnable examples such as using Jupyter Notebooks and exercises relating to the book.

Algorithms in Bioinformatics Dan Brown, Burkhard Morgenstern, 2014-08-15 This book constitutes the refereed proceedings of the 14th International Workshop on Algorithms in Bioinformatics WABI 2014 held in Wroclaw Poland in September 2014. WABI 2014 was one of seven conferences that were organized as part of ALGO 2014. WABI is an annual conference series on all aspects of algorithms and data structure in molecular biology, genomics and phylogeny data analysis. The 26 full papers presented together with a short abstract were carefully reviewed and selected from 61 submissions. The selected papers cover a wide range of topics from sequence and genome analysis through phylogeny reconstruction and networks to mass spectrometry data analysis.

Bioinformatics Algorithms Ion Mandoiu, Alexander Zelikovsky, 2008-02-25 Presents algorithmic techniques for solving problems in bioinformatics including applications that shed new light on molecular biology. This book introduces algorithmic techniques in bioinformatics emphasizing their application to solving novel problems in post genomic molecular biology. Beginning with a thought provoking discussion on the role of algorithms in twenty first century bioinformatics education. Bioinformatics Algorithms covers General algorithmic techniques including dynamic programming, graph theoretical methods, hidden Markov models, the fast Fourier transform, seeding and approximation algorithms. Algorithms and tools for genome and sequence analysis including formal and approximate models for gene clusters, advanced algorithms for non overlapping local alignments and genome tilings, multiplex PCR primer set selection and sequence network motif finding. Microarray design and analysis including algorithms for microarray physical design, missing value imputation and meta analysis of gene expression data. Algorithmic issues arising in the analysis of genetic variation across human population including computational inference of haplotypes from genotype data and disease association search in case control epidemiologic studies. Algorithmic approaches in structural and systems biology including topological and structural classification in biochemistry and prediction of protein-protein and domain-domain interactions.

Each chapter begins with a self contained introduction to a computational problem continues with a brief review of the existing literature on the subject and an in depth description of recent algorithmic and methodological developments and concludes with a brief experimental study and a discussion of open research challenges This clear and approachable presentation makes the book appropriate for researchers practitioners and graduate students alike **WALCOM:**

Algorithms and Computation Mohammad Kaykobad, Rossella Petreschi, 2016-03-08 This book constitutes the proceedings of the 10th International Workshop on Algorithms and Computation WALCOM 2016 held in Kathmandu Nepal in March 2016 The 27 full papers presented together with 4 invited talks were carefully reviewed and selected from 68 submissions The papers cover a wide range of topics such as approximation algorithms computational complexity computational geometry data structures graph algorithms graph coloring graph exploration and online algorithms Machine Learning Approaches To Bioinformatics Zheng Rong Yang, 2010-05-06 This book covers a wide range of subjects in applying machine learning approaches for bioinformatics projects The book succeeds on two key unique features First it introduces the most widely used machine learning approaches in bioinformatics and discusses with evaluations from real case studies how they are used in individual bioinformatics projects Second it introduces state of the art bioinformatics research methods The theoretical parts and the practical parts are well integrated for readers to follow the existing procedures in individual research Unlike most of the bioinformatics books on the market the content coverage is not limited to just one subject A broad spectrum of relevant topics in bioinformatics including systematic data mining and computational systems biology researches are brought together in this book thereby offering an efficient and convenient platform for teaching purposes An essential reference for both final year undergraduates and graduate students in universities as well as a comprehensive handbook for new researchers this book will also serve as a practical guide for software development in relevant bioinformatics projects
