Algebraic Theories Leonard Dickson:

Algebraic Theories by Leonard E. Dickson Leonard Eugene Dickson, 1959 **Modern Algebraic Theories** Leonard Eugene Dickson, 1926 **Algebraic Theories** Leonard Dickson, 2014-03-05 This in depth introduction to classical topics in higher algebra provides rigorous detailed proofs for its explorations of some of mathematics most significant concepts including matrices invariants and groups Algebraic Theories studies all of the important theories its extensive offerings range from the foundations of higher algebra and the Galois theory of algebraic equations to finite linear groups including Klein's icosahedron and the theory of equations of the fifth degree and algebraic invariants The full treatment includes matrices linear transformations elementary divisors and invariant factors and quadratic bilinear and Hermitian forms both singly and in pairs The results are classical with due attention to issues of rationality Elementary divisors and invariant factors receive simple natural introductions in connection with the classical form and a rational canonical form of linear transformations All topics are developed with a remarkable lucidity and discussed in close connection with their most frequent mathematical applications **Modern Algebraic Theories** Leonard Eugene Dickson, 1926 **Abel's Proof** Peter Pesic, 2016-06-17 The intellectual and human story of a mathematical proof that transformed our ideas about mathematics In 1824 a young Norwegian named Niels Henrik Abel proved conclusively that algebraic equations of the fifth order are not solvable in radicals In this book Peter Pesic shows what an important event this was in the history of thought He also presents it as a remarkable human story Abel was twenty one when he self published his proof and he died five years later poor and depressed just before the proof started to receive wide acclaim Abel's attempts to reach out to the mathematical elite of the day had been spurned and he was unable to find a position that would allow him to work in peace and marry his fianc But Pesic's story begins long before Abel and continues to the present day for Abel's proof changed how we think about mathematics and its relation to the real world Starting with the Greeks who invented the idea of mathematical proof Pesic shows how mathematics found its sources in the real world the shapes of things the accounting needs of merchants and then reached beyond those sources toward something more universal The Pythagoreans attempts to deal with irrational numbers foreshadowed the slow emergence of abstract mathematics Pesic focuses on the contested development of algebra which even Newton resisted and the gradual acceptance of the usefulness and perhaps even beauty of abstractions that seem to invoke realities with dimensions outside human experience Pesic tells this story as a history of ideas with mathematical details incorporated in boxes The book also includes a new annotated translation of Abel's original proof *The Collected Mathematical Papers of Leonard Eugene Dickson* Leonard Eugene Dickson, 1975 **A Century of Mathematics in America** Peter L. Duren, Richard Askey, Uta C. Merzbach, Harold M. Edwards, 1988 Part of the History of Mathematics series this book presents a variety of perspectives on the political social and mathematical forces that have shaped the American mathematical community **Algebraic theories** Leonard Eugene Dickson, 1959 **Linear Algebra** Sterling K.

Berberian, 2014-07-16 Introductory treatment covers basic theory of vector spaces and linear maps dimension determinants eigenvalues and eigenvectors plus more advanced topics such as the study of canonical forms for matrices 1992 edition

Episodes in the History of Modern Algebra (1800-1950) Jeremy J. Gray, Karen Hunger Parshall, 2011-08-31 Algebra as a subdiscipline of mathematics arguably has a history going back some 4000 years to ancient Mesopotamia The history however of what is recognized today as high school algebra is much shorter extending back to the sixteenth century while the history of what practicing mathematicians call modern algebra is even shorter still The present volume provides a glimpse into the complicated and often convoluted history of this latter conception of algebra by juxtaposing twelve episodes in the evolution of modern algebra from the early nineteenth century work of Charles Babbage on functional equations to Alexandre Grothendieck's mid twentieth century metaphor of a rising sea in his categorical approach to algebraic geometry In addition to considering the technical development of various aspects of algebraic thought the historians of modern algebra whose work is united in this volume explore such themes as the changing aims and organization of the subject as well as the often complex lines of mathematical communication within and across national boundaries Among the specific algebraic ideas considered are the concept of divisibility and the introduction of non commutative algebras into the study of number theory and the emergence of algebraic geometry in the twentieth century The resulting volume is essential reading for anyone interested in the history of modern mathematics in general and modern algebra in particular It will be of particular interest to mathematicians and historians of mathematics
