Dikaiakos,2004-12-07 This book constitutes the thoroughly refereed post proceedings of the Second European AcrossGrid Conference AxGrids 2004 held in Nicosia Cyprus in January 2004 The 27 revised full papers and 4 revised short papers presented were carefully selected during two rounds of reviewing and improvement from 57 submissions The papers address the entire range of current topics in grid computing from computational and data grids to the semantic grid and grid application in various fields **Lectures in Parallel Computation** Alan Gibbons,Paul Spirakis,1993-03-18 The foundations of parallel computation especially the efficiency of computation are the concern of this book Distinguished international researchers have contributed fifteen chapters which together form a coherent stream taking the reader who has little prior knowledge of the field to a position of being familiar with leading edge issues The book may also function as a source of teaching material and reference for researchers The first part is devoted to the Parallel Random Access Machine P RAM model of parallel computation The initial chapters justify and define the model which is then used for the development of algorithm design in a variety of application areas such as deterministic algorithms randomisation and algorithm resilience The second part deals with distributed memory models of computation The question of efficiently implementing P RAM algorithms within these models is addressed as are the immensely interesting prospects for general purpose parallel computation
