Speaking of Events James Higginbotham, Fabio Pianesi, Achille C. Varzi, 2000-04-13 In recent years the idea that an adequate semantics of ordinary language calls for some theory of events has sparked considerable debate among linguists and philosophers *Speaking of Events* offers a vivid and up to date indication of this debate with emphasis precisely on the interplay between linguistic applications and philosophical implications Each chapter has been written expressly for this volume by leading authors in the field including Nicholas Asher Pier Marco Bertinetto Johannes Brandl Denis Delfitto Regine Eckardt James Higginbotham Alessandro Lenci Terence Parsons Alice ter Meulen and Henk Verkuyl [Events and Their Names](#) Jonathan Bennett, 1988 This is a study of events and their place in our language and thought The author discusses what kind of item an event is how the language of events works and how these two themes are interrelated He argues that most of the supposedly metaphysical literature on events is really about semantics of their names and that the true metaphysic of events known by Leibniz and rediscovered by Jaegwon Kim has not been universally accepted because it has been obscured by a false semantic theory **Barnes & Noble Events** ,1995 *Understanding Events* Thomas F. Shipley, Jeffrey M. Zacks, 2008-02-25 We effortlessly recognize all sorts of events from simple events like people walking to complex events like leaves blowing in the wind We can also remember and describe these events and in general react appropriately to them for example in avoiding an approaching object Our phenomenal ease interacting with events belies the complexity of the underlying processes we use to deal with them Driven by an interest in these complex processes research on event perception has been growing rapidly Events are the basis of all experience so understanding how humans perceive represent and act on them will have a significant impact on many areas of psychology Unfortunately much of the research on event perception in visual perception motor control linguistics and computer science has progressed without much interaction This volume is the first to bring together computational neurological and psychological research on how humans detect classify remember and act on events The book will provide professional and student researchers with a comprehensive collection of the latest research in these diverse fields **Things, Facts and Events** ,2022-04-19 The volume deals with ontological and semantical issues concerning things facts and events Ontology tells us about what there is whereas semantics provides answers to how we refer to what there is Basic ontological categories are commonly accepted along with basic linguistic types and linguistic types are accepted as basic if and because they refer to acknowledged ontological categories In that sense both disciplines are concerned with structure the structure of the world and the structure of our language An extended introduction overviews the topic as a whole presenting in detail its history and the main contemporary approaches and discussions More than 20 contributions by internationally acknowledged scholars make the volume a comprehensive study of some very fundamental philosophical entities [Proceedings of the Sixth Berkeley Symposium on Mathematical Statistics and Probability, Volume III](#) Lucien M.
