1. **Description:** an individual living thing; **Example:** any individual organism, such as a moose
2. **Description:** a group of the same species that lives in one area; **Example:** any group of animals of the same species, such as a herd of moose
3. **Description:** group of different species that live together in one area; **Example:** any groups of different species that live in the same area, such as herds of moose and bison
4. **Description:** includes all of the organisms as well as the climate, soil, water, rocks, and other nonliving things in a given area; **Example:** any ecosystem, such as the Greater Yellowstone Ecosystem
5. **Description:** a major regional or global community of organisms; **Example:** any biome, such as a temperate grassland
6. observation is the act of carefully watching something over time
7. direct surveys are used for animals that are easy to follow and involve watching animals with the naked eye or with tools such as binoculars or scopes; indirect surveys are used for species that are difficult to track and involve searching for other signs of an animal's presence, such as looking for feces or a recent kill
8. **Laboratory:** benefit: able to control variables, drawback: experiments are performed in artificial settings that may not completely reflect a real setting; **Field:** benefit: more accurately reflects real conditions, drawback: harder to control all variables
9. scientists might want to use a model when their experiment is not practical to perform in real-time, such as when attempting to forecast how conditions might change in the future; models are also used to predict how changing one or more variables may affect future conditions
10. Ecology is the study of the interactions among living things, and between living things and their surroundings.
11. a biome contains both ecosystems and communities of organisms
