

Biology Semester 1 Review 2022

Unit 1: Instructional Sequence 1:

SC.912.L.1.18.12 Discuss the special properties of water that contribute to Earth's suitability as an environment for life: cohesive behavior, ability to moderate temperature, expansion upon freezing and versatility as a solvent. Students will generally be able to summarize the properties of water and relate how these properties make water essential for life on earth

1. Describe each of the following properties of water and provide an example for how it helps to support life on Earth (be specific).

- Cohesion and Adhesion

cohesion- when water molecules are attracted to each other

adhesion- when water molecules are attracted to molecules on another surface

- Specific heat capacity

when water can absorb a lot of energy and resists change between states of matter. this allows it to be a subtle habitat and regulate ecosystems temps. (more water in the eco system=more constant the temp can maintain

- Expansion upon freezing

is less dense, causing it to turn into a solid; making ice; a solid form allowing it to expand, thus allowing it to float

- Universal solvent

water is polar so it can easily dissolve other polar molecules

- Hydrogen bonds
-

2. What is the relationship between the properties of water and transpiration that takes place in plants?

adhesion and cohesion help transport water into the roots of plants, up the stem and to the leaf, it pulls another water molecule up; like a link in a chain. cohesion links the water together, adhesion allows water to the internal structure of the plant.

Biology Semester 2 Review Packet
