Building Parallel, Embedded, and Real-Time Applications with Ada John W. McCormick, Frank Singhoff, Jérôme Hugues, 2011-04-07 The arrival and popularity of multi core processors has sparked a renewed interest in the development of parallel programs Similarly the availability of low cost microprocessors and sensors has generated a great interest in embedded real time programs This book provides students and programmers whose backgrounds are in traditional sequential programming with the opportunity to expand their capabilities into parallel embedded real time and distributed computing It also addresses the theoretical foundation of real time scheduling analysis focusing on theory that is useful for actual applications Written by award winning educators at a level suitable for undergraduates and beginning graduate students this book is the first truly entry level textbook in the subject Complete examples allow readers to understand the context in which a new concept is used and enable them to build and run the examples make changes and observe the results

Signal Processing in Radar Systems Vyacheslav Tuzlukov, 2017-12-19 An essential task in radar systems is to find an appropriate solution to the problems related to robust signal processing and the definition of signal parameters Signal Processing in Radar Systems addresses robust signal processing problems in complex radar systems and digital signal processing subsystems It also tackles the important issue of defining signal parameters The book presents problems related to traditional methods of synthesis and analysis of the main digital signal processing operations It also examines problems related to modern methods of robust signal processing in noise with a focus on the generalized approach to signal processing in noise under coherent filtering In addition the book puts forth a new problem statement and new methods to solve problems of adaptation and control by functioning processes Taking a systems approach to designing complex radar systems it offers readers guidance in solving optimization problems Organized into three parts the book first discusses the main design principles of the modern robust digital signal processing algorithms used in complex radar systems The second part covers the main principles of computer system design for these algorithms and provides real world examples of systems The

third part deals with experimental measurements of the main statistical parameters of stochastic processes It also defines their estimations for robust signal processing in complex radar systems Written by an internationally recognized professor and expert in signal processing this book summarizes investigations carried out over the past 30 years It supplies practitioners researchers and students with general principles for designing the robust digital signal processing algorithms employed by complex radar systems

Building High Integrity Applications with SPARK John W. McCormick, Peter C. Chapin, 2015-08-31 Software is pervasive in our lives We are accustomed to dealing with the failures of much of that software restarting an application is a very familiar solution Such solutions are unacceptable when the software controls our cars airplanes and medical devices or manages our private information These applications must run without error SPARK provides a means based on mathematical proof to guarantee that a program has no errors SPARK is a formally defined programming language and a set of verification tools specifically designed to support the development of software used in high integrity applications Using SPARK developers can formally verify properties of their code such as information flow freedom from runtime errors functional correctness security properties and safety properties Written by two SPARK experts this is the first introduction to the just released 2014 version It will help students and developers alike master the basic concepts for building systems with SPARK

Embedded and Real Time System Development: A Software Engineering Perspective Mohammad Ayoub Khan, Saqib Saeed, Ashraf Darwish, Ajith Abraham, 2013-11-19 Nowadays embedded and real time systems contain complex software The complexity of embedded systems is increasing and the amount and variety of software in the embedded products are growing This creates a big challenge for embedded and real time software development processes and there is a need to develop separate metrics and benchmarks Embedded and Real Time System Development A Software Engineering Perspective Concepts Methods and Principles presents practical as well as conceptual knowledge of the latest tools techniques and methodologies of embedded software engineering and real time systems Each chapter includes an in depth investigation regarding the actual or potential role of software engineering tools in the context of the embedded system and real time system The book presents state of the art and future perspectives with industry experts researchers and academicians sharing ideas and experiences including surrounding frontier technologies breakthroughs innovative solutions and applications The book is organized into four parts Embedded Software Development Process Design Patterns and Development Methodology Modelling Framework and Performance Analysis Power Management and Deployment with altogether 12 chapters The book is aiming at i undergraduate students and postgraduate students conducting research in the areas of embedded software engineering and real time systems ii researchers at universities and other institutions working in these fields and iii practitioners in the R D departments of embedded system It can be used as an advanced reference for a course taught at the postgraduate level in embedded software engineering and real time systems
