Algorithmic Learning Theory Shai Ben David, John Case, Akira Maruoka, 2004-09-24 Algorithmic learning theory is mathematics about computer programs which learn from experience This involves considerable interaction between various mathematical disciplines including theory of computation statistics and combinatorics There is also considerable interaction with the practical empirical fields of machine and statistical learning in which a principal aim is to predict from past data about phenomena useful features of future data from the same phenomena The papers in this volume cover a broad range of topics of current research in the field of algorithmic learning theory We have divided the 29 technical contributed papers in this volume into eight categories corresponding to eight sessions reflecting this broad range The categories featured are Inductive Inference Approximate Optimization Algorithms Online Sequence Prediction Statistical Analysis of Unlabeled Data PAC Learning Boosting Statistical supervised Learning Logic Based Learning and Query Reinforcement Learning Below we give a brief overview of the field placing each of these topics in the general context of the field Formal models of automated learning reflect various facets of the wide range of activities that can be viewed as learning A first dichotomy is between viewing learning as an indefinite process and viewing it as a finite activity with a defined termination Inductive Inference models focus on indefinite learning processes requiring only eventual success of the learner to converge to a satisfactory conclusion

Aspects of Kolmogorov Complexity the Physics of Information Bradley S. Tice, 2022-09-01 The research presented in Aspects of Kolmogorov Complexity addresses the fundamental standard of defining randomness as measured by a Martin Lof level of randomness as found in random sequential binary strings A classical study of statistics that addresses both a fundamental standard of statistics as well as an applied measure for statistical communication theory The research points to compression levels in a random state that are greater than is found in current literature A historical overview of the field of Kolmogorov Complexity and Algorithmic Information Theory a subfield of Information Theory is given as well as examples using a radix 3 radix 4 and

radix 5 base numbers for both random and non random sequential strings The text also examines monochromatic and chromatic symbols and both theoretical and applied aspects of data compression as they relate to the transmission and storage of information The appendix contains papers on the subject given at conferences and the references are current Contents Technical topics addressed in Aspects of Kolmogorov Complexity include Statistical Communication Theory Algorithmic Information Theory Kolmogorov Complexity Martin Lof Randomness Compression Transmission and Storage of Information
