

The background of the entire image is a deep-sea environment with a dark blue, almost black, background speckled with numerous small, bright white and blue dots, resembling stars or distant galaxies. In the lower half, there are several large, glowing green and blue microbial structures. One prominent structure in the lower left is a large, circular, glowing green ring with a dark center. To its right, there's a smaller, more complex structure with a central yellow-green core and radiating blue and green filaments. In the upper left, there's a cluster of small, glowing green dots. In the upper right, there are thin, wavy, green lines. The overall effect is a sense of vast, mysterious, and alien life in the deep ocean.

Deepwater Alchemy Lisa Yin Han,2024-08-27 How underwater mediation has transformed deep sea spaces into resource rich frontiers Green energy technologies such as windmills solar panels and electric vehicles may soon depend on material found at the seabed How did a space once imagined to be empty and unfathomable come to be thought of as a treasure trove of resources Lisa Yin Han traces how contemporary developments in underwater sensing and imaging materially and imaginatively transmogrify the ocean bottom into a resource frontier capable of sustaining a digitally connected global future Set against the backdrop of climate change energy transition and the expansion of industrial offshore extractions Deepwater Alchemy looks at oceanic media and its representation of the seabed in terms of valuable resources From high tech simulations to laboratories and archives that collect and analyze sediments Han explores the media technologies that survey visualize and condition the possibility for industrial resource extraction introducing the concept of extractive mediation to describe the conflations between resource prospecting and undersea knowledge production Moving away from anthropocentric frameworks she argues that we must equalize access to deep ocean mediation and include the submerged perspectives of multispecies communities From the proliferation of petroleum seismology to environmental impact research on seabed mining to the development of internet enabled seafloor observatories Deepwater Alchemy shows us that deepwater mediation is entangled in existential hopes and fears for our planetary future As the ocean bottom becomes increasingly accessible to people Han prompts us to ask not whether we can

tame the seafloor but rather why and for whom are we taming it **Wild Blue Media** Melody Jue, 2020-02-28 In *Wild Blue Media* Melody Jue destabilizes terrestrial based ways of knowing and reorients our perception of the world by considering the ocean itself as a media environment a place where the weight and opacity of seawater transforms how information is created stored transmitted and perceived By recentring media theory on and under the sea Jue calls attention to the differences between perceptual environments and how we think within and through them as embodied observers In doing so she provides media studies with alternatives to familiar theoretical frameworks thereby challenging scholars to navigate unfamiliar oceanic conditions of orientation materiality and saturation Jue not only examines media about the ocean science fiction narratives documentary films ocean data visualizations animal communication methods and underwater art but reexamines media through the ocean submerging media theory underwater to estrange it from terrestrial habits of perception while reframing our understanding of mediation objectivity and metaphor
