Houde, Steven A. Berkowitz, 2019-11-13 Biophysical Characterization of Proteins in Developing Biopharmaceuticals Second Edition presents the latest on the analysis and characterization of the higher order structure HOS or conformation of protein based drugs Starting from the very basics of protein structure this book explains the best way to achieve this goal using key methods commonly employed in the biopharmaceutical industry This book will help today's industrial scientists plan a career in this industry and successfully implement these biophysical methodologies This updated edition has been fully revised with new chapters focusing on the use of chromatography and electrophoresis and the biophysical characterization of very large biopharmaceuticals In addition best practices of applying statistical analysis to biophysical characterization data is included along with practical issues associated with the concept of a biopharmaceutical's developability and the technical decision making process needed when dealing with biophysical characterization data Presents basic protein characterization methods and tools applicable to bio pharmaceutical research and development Highlights the capabilities and limitations of each technique Discusses the underlining science of each tool Empowers industrial biophysical chemists by providing a roadmap for applying biophysical tools Outlines the needs for new characterization and analytical tools in the biopharmaceutical industry *The Future of Pharmaceuticals* Sarfaraz K. Niazi, 2022-02-28 Before now biological systems could only be expressed in terms of linear relationships however as knowledge grows and new techniques of analysis on biological systems is made available we are realizing the non linearity of these systems The concepts and techniques of nonlinear analysis allow for more realistic and accurate models in science The Future of Pharmaceuticals A Nonlinear Analysis provides an opportunity to understand the non linearity of biological systems and its application in various areas of science primarily pharmaceutical sciences This book will benefit professionals in pharmaceutical industries academia and policy who are interested in an entirely new approach to how we will treat disease in the future Key Features Addresses a new approach of nonlinear analysis Applies a theory of projection to chalk out the future instead of basing on linear evolution Provides an opportunity to better understand the non linearity in biological

systems and its applications in various areas of science primarily pharmaceutical sciences Helps change the thought process for those looking for answers to their questions which they do not find in the linear relationship approach Encourages a broader perspective for the creative process of drug development

The Science and Regulations of Naturally Derived

Complex Drugs Ram Sasisekharan,Sau L. Lee,Amy Rosenberg,Larry A. Walker,2019-04-23 This volume in the AAPS Advances series covers various quality safety and clinical aspects of drug development that are relevant to new and or generic drugs containing a complex mixture of molecules Specific topics discussed include raw materials sourcing manufacturing controls characterization identification of critical product quality components and attributes identification of impurities particularly as they bear on toxicity and immunogenicity clinical trial study design considerations and the regulatory science applications to development of such complex mixtures Complex mixtures are challenging to characterize and analyze using standard methods Further challenges extend throughout the product development cycle from raw material control to clinical study design The regulatory landscape is rapidly changing as new types of complex mixtures are introduced into clinical trials and to the market e g traditional Chinese medicines and medical marijuana products while older products are facing generic competition for the first time e g enoxaparin The future outlook for complex generic drug products as opposed to the more commonly developed targeted single agent drug products is not clear The risks pertaining to lack of a full understanding of raw material control process and controls in manufacture as well as characterization of a complex mixture were seen vividly during the heparin crisis of 2008 As such powerful lessons have been learned about the regulatory science specific to complex products The Science and Regulations of Naturally Derived Complex Drugs addresses the interests among industry academics and government on the issues surrounding the future development of mixtures for medicinal use
