Global AIDS Alexander C. Irwin,Joyce V. Millen,Dorothy Fallows,2003

AIDS is the most devastating communicable disease in history and poor countries have been most severely impacted by the pandemic Since the mid 1990s the use of antiretroviral drug therapies has dramatically extended life expectancy and improved life quality for those with HIV AIDS who can afford the costly treatments Yet even as it raises new hope this medical advance has intensified ethical and political questions about AIDS Antiretroviral use by those with money and access throws the contrasting outcomes among AIDS sufferers throughout the world into high relief It has also revealed what many people with AIDS have known all along the disease is not only propagated by the virus but by racism entrenched poverty structural inequality and the legacy of colonial domination and exploitation *Global AIDS Myths and Facts* aims to present the facts about HIV AIDS and empower people for informed active participation in the global struggle against this plague To mobilize the energy commitment and resources required for the fight Irwin and Millen tackle 10 destructive myths that hamper implementation of effective and equitable anti HIV AIDS programs World leaders like Kofi Annan have announced treatment and prevention initiatives that are opening new possibilities But the authors argue that only sustained political pressure from the grassroots __forging links across national boundaries professional and social categories and racial ethnic and religious identities __will halt the pandemic __s spread

Bioethical Challenges in New Hiv Prevention Technologies

Calvin Gwandure, Ruth Gwandure, 2018-05-23 Ruth Gwandure earned her master of science degree in medicine bioethics and law from the University of the Witwatersrand South Africa Her research and consulting fields include bioethics health law environmental bioethics research ethics HIV and AIDS ethics and law clinical ethics and HIV counselling and testing in schools Calvin Gwandure has a PhD in psychology He graduated from Nelson Mandela University South Africa His research and consulting fields include HIV and AIDS prevention new HIV prevention technologies HIV risk behavior and group behavior Clinical trials on HIV and AIDS prevention face challenges associated with infection of participants with HIV and sexually transmitted infections Participants also experience adverse events associated with voluntary medical male circumcision and the use of microbicides and vaccines in clinical trials The results obtained from clinical trials investigating the efficacy of microbicides and vaccines in preventing HIV infection are disappointing but there is hope that one day a breakthrough could be made Clinical trials on voluntary medical male circumcision and preexposure prophylaxis have shown positive results that warranted approval by the US Food and Drug Administration FDA and the World Health Organization WHO The major challenge experienced in new HIV prevention clinical trials that are underway and in approved interventions that are being scaled up apparently relates to HIV incidence that threatens the social value and scientific validity of the interventions Paradoxically the clinical trials and scale up interventions have become the new sources of HIV infection although the hypothesized benefit to be realized in the end is conceptualized as outweighing the current risks involved
