Integrated Management of Arthropod Pests and Insect Borne Diseases Aurelio Ciancio, K.G. Mukerji, 2010-06-16 This is the last volume of the IPMD series It aims in a multi disciplinary approach at reviewing and discussing recent advances and achievements in the practice of crop protection and integrated pest and disease management This last effort deals with management of arthropods and is organized with a first section on biological control in citrus orchards a second one on advanced and integrated technologies

for insect pest management and a last section dealing with mites and their biological control. A wide and exhaustive literature already covers several aspects of chemical or biological control of insects and mites but there is still a need for a more holistic vision of management accounting for different problems and solutions as they are applied or developed in different regions and cropping systems worldwide. In this series we attempted to fill this gap providing an informative coverage for a broad range of agricultural systems and situations.
