Artificial Evolution Jin-Kao Hao, Evelyne Lutton, Edmund Ronald, 2014-01-15 **The Art of Artificial Evolution** Juan J. Romero, Penousal Machado, 2007-11-13 Art is the Queen of all sciences communicating knowledge to all the generations of the world Leonardo da Vinci Artistic behavior is one of the most valued qualities of the human mind Although artistic manifestations vary from culture to culture dedication to artistic tasks is common to all In other words artistic behavior is a universal trait of the human species The current Western definition of art is relatively new However a dedication to artistic endeavors such as the embellishment of tools body ornamentation or gathering of unusual arguably aesthetic objects can be traced back to the origins of humanity That is art is ever present in human history and prehistory

Art and sciences share along and during relationship The best known example of the exploration of this relationship is probably the work of Leonardo da Vinci Somewhere in the 19th century art and science grew apart but the cross transfer of concepts between the two domains continued to exist Currently albeit the need for specialization there is a growing interest in the exploration of the connections between art and science Focusing on computer science it is interesting to notice that early pioneers of this discipline such as Ada Byron and Alan Turing showed an interest in using computational devices for art making purposes Oddly in spite of this early interest and the ubiquity of art it has received relatively little attention from the computer science community in general and more surprisingly from the artificial intelligence community
