Artificial Intelligence in the Pacific Rim Hozumi Tanaka, 1991 In the last decade AI firmly settled into our industrial society with the expert systems as the representative product However almost every one of the systems could cover only a single task domain In the highly mechanized world of the 21st century systems will become smart and user friendly enough to cover a wide range of task domains Systems with much user friendliness must be multilingual because users in different domains usually have different languages Language is formed in its own culture Therefore promotion for cross cultural scientific interchange will be indispensable for the progress of AI

Paradigms of Artificial Intelligence Programming Peter Norvig, 2014-06-28 Paradigms of AI Programming is the first text to teach advanced Common Lisp techniques in the context of building major AI systems By reconstructing authentic complex AI programs using state of the art Common Lisp the book teaches students and professionals how to build and debug robust practical programs while demonstrating superior programming style and important AI concepts The author strongly emphasizes the practical performance issues involved in writing real working programs of significant size Chapters on troubleshooting and efficiency are included along with a discussion of the fundamentals of object oriented programming and a description of the main CLOS functions This volume is an excellent text for a course on AI programming a useful supplement for general AI courses and an indispensable reference for the professional programmer
