Cooling System

	WARNING
Running engines produce heat. Severe burns can occur on contact.	
• Allow muffler, engine cylinder fins, and radiator to cool before touching. • Remove accumulated combustibles from muffler area and cylinder area.	

Dirt or debris can restrict air flow and cause the engine to overheat, resulting in poor performance and reduced engine life. Continued operation with a clogged cooling system can cause severe overheating and possible engine damage. Clean these areas (A, Figure 1-4) yearly or more often when dust or airborne debris is present.

NOTICE: Do not use water to clean the engine. Water could contaminate the fuel system. Use a brush or dry cloth to clean the engine.

Charging Battery

1. Clean the battery of all dirt and corrosion.
2. Clean, then lightly grease the terminals.
3. Bring the battery to full charge using a taper charge (automatically reduces charge rate).

NOTE: Do not exceed a charge rate of 1/10 ampere for every ampere of battery rating. Consult the battery manufacturer for maximum charge recommendations.

NOTE: If the battery gets hot to the touch or is spitting acid (gassing) excessively, unplug the charger periodically.

4. With the battery fully charged, check the specific gravity readings of each cell with a temperature-compensated Battery Hydrometer (Figure 1-5). All readings should be above 1.250 (compensating for temperature). If the readings vary by 0.050 or if all cells read less than 1.225, replace the battery.
