Dartnall, 2013-04-17 Creativity is one of the least understood aspects of intelligence and is often seen as intuitive and not susceptible to rational enquiry Recently however there has been a resurgence of interest in the area principally in artificial intelligence and cognitive science but also in psychology philosophy computer science logic mathematics sociology and architecture and design This volume brings this work together and provides an overview of this rapidly developing field It addresses a range of issues Can computers be creative Can they help us to understand human creativity How can artificial intelligence AI enhance human creativity How in particular can it contribute to the sciences of the artificial such as design Does the new wave of AI connectionism geneticism and artificial life offer more promise in these areas than classical symbol handling AI What would the implications be for AI and cognitive science if computers could not be creative These issues are explored in five interrelated parts each of which is introduced and explained by a leading figure in the field Prologue Margaret Boden Part I Foundational Issues Terry Dartnall Part II Creativity and Cognition Graeme S Halford and Robert Levinson Part III Creativity and Connectionism Chris Thornton Part IV Creativity and Design John Gero Part V Human Creativity Enhancement Ernest Edmonds Epilogue Douglas Hofstadter For researchers in AI cognitive science computer science philosophy psychology mathematics logic sociology and architecture and design and anyone interested in the rapidly growing field of artificial intelligence and creativity **Artificial Intelligence and the Arts** Penousal Machado, Juan Romero, Gary Greenfield, 2021-10-13 Emotions creativity aesthetics artistic behavior divergent thoughts and curiosity are both fundamental to the human experience and instrumental in the development of human centered artificial intelligence systems that can relate communicate and understand human motivations desires and needs In this book the editors put

forward two core propositions creative artistic behavior is one of the key challenges of artificial intelligence research and computer assisted creativity and human centered artificial intelligence systems are the driving forces for research in this area The invited chapters examine computational creativity and more specifically systems that exhibit artistic behavior or can improve humans creative and artistic abilities The authors synthesize and reflect on current trends identify core challenges and opportunities and present novel contributions and applications in domains such as the visual arts music 3D environments and games The book will be valuable for researchers creatives and others engaged with the relationship between artificial intelligence and the arts

AI for Creativity Niklas Hageback, 2021-09-23 What is computational creativity Can AI learn to be creative One of the human mind's most valuable features is the capacity to formulate creative thoughts an ability that through quantum leap innovations has propelled us to the current digital age However creative breakthroughs are easier said than done Appearing less frequently and more sporadically than desired it seems that we have not yet fully cracked the creative code But with the rapid advances in artificial intelligence which have come to provide an ever closer proximity with the cognitive faculties of mankind can this emerging technology improve our creative capabilities What will that look like and will it be the missing link in the man machine enigma *AI for Creativity* provides a fascinating look at what is currently emerging in the very cutting edge area of artificial intelligence and the tools being developed to enable computational creativity that holds the propensity to dramatically change our lives

Artificial Intelligence, Co-Creation and Creativity, 2024-11 Artificial intelligence has deeply impacted our understanding of creativity and the human ability to generate creative outputs New applications for creative tasks are rapidly evolving and new tools are constantly being developed with much greater optimal capabilities Importantly the success of implementing such tools for creative tasks is still heavily dependent on human supervision and input Therefore it is vital to understand and critically reflect on the nature of co creative processes between humans and AI This book addresses such issues and provides insights into how humans can augment their capabilities of generating creative and innovative outputs by successfully co creating with artificial intelligence The book is intentionally divided into three main parts to allow for a comprehensive and holistic perspective on human and AI co creation for creative tasks The sections are divided as PART 1 Principles of AI And Creativity PART 2 Critical Issues on Artificial Co Creation and PART 3 Industry Specific Discussions Consequently the book provides a holistic insight on the topic covering various issues and perspectives and enabling an accessible read to a broad audience For example chapters cover examples across different industry sectors including music arts science and management Furthermore the book covers critical questions involving copyrights ethical concerns relationship with algorithms and context based issues Only by critically reflecting on the intrinsic issues of AI and learning how to work with it effectively for creative purposes we will be able to benefit from its full potential to augment human creative abilities in an appropriate manner This novel edited collection is an essential read for scholars working on the intersection of AI creativity arts and

management **Artificial Intelligence and Literary Creativity** Selmer Bringsjord, David Ferrucci, 1999-09-01 Is human creativity a wall that AI can never scale Many people are happy to admit that experts in many domains can be matched by either knowledge based or sub symbolic systems but even some AI researchers harbor the hope that when it comes to feats of sheer brilliance mind over machine is an unalterable fact In this book the authors push AI toward a time when machines can autonomously write not just humdrum stories of the sort seen for years in AI but first rate fiction thought to be the province of human genius It reports on five years of effort devoted to building a story generator the BRUTUS 1 system This book was written for three general reasons The first theoretical reason for investing time money and talent in the quest for a truly creative machine is to work toward an answer to the question of whether we ourselves are machines The second theoretical reason is to silence those who believe that logic is forever closed off from the emotional world of creativity The practical rationale for this endeavor and the third reason is that machines able to work alongside humans in arenas calling for creativity will have incalculable worth *Artificial Intelligence and Creativity* T Dartnall, 2014-01-15 Creativity is one of the least understood aspects of intelligence and is often seen as intuitive and not susceptible to rational enquiry Recently however there has been a resurgence of interest in the area principally in artificial intelligence and cognitive science but also in psychology philosophy computer science logic mathematics sociology and architecture and design This volume brings this work together and provides an overview of this rapidly developing field It addresses a range of issues Can computers be creative Can they help us to understand human creativity How can artificial intelligence AI enhance human creativity How in particular can it contribute to the sciences of the artificial such as design Does the new wave of AI connectionism geneticism and artificial life offer more promise in these areas than classical symbol handling AI What would the implications be for AI and cognitive science if computers could not be creative These issues are explored in five interrelated parts each of which is introduced and explained by a leading figure in the field Prologue Margaret Boden Part I Foundational Issues Terry Dartnall Part II Creativity and Cognition Graeme S Halford and Robert Levinson Part III Creativity and Connectionism Chris Thornton Part IV Creativity and Design John Gero Part V Human Creativity Enhancement Ernest Edmonds Epilogue Douglas Hofstadter For researchers in AI cognitive science computer science philosophy psychology mathematics logic sociology and architecture and design and anyone interested in the rapidly growing field of artificial intelligence and creativity Law, Human Creativity, and Generative Artificial Intelligence Julija Kalpokiene, 2024-08 Computational Creativity Tony Veale, F. Amílcar Cardoso, 2019-07-25 Computational creativity is an emerging field of research within AI that focuses on the capacity of machines to both generate and evaluate novel outputs that would if produced by a human be considered creative This book is intended to be a canonical text for this new discipline through which researchers and students can absorb the philosophy of the field and learn its methods After a comprehensive introduction to the idea of systematizing creativity the contributions address topics such as autonomous intentionality conceptual blending literature mining computational design
