**Handbook of Neuroevolution Through Erlang** Gene I. Sher, 2012-11-06 Handbook of Neuroevolution Through Erlang presents both the theory behind and the methodology of developing a neuroevolutionary based computational intelligence system using Erlang With a foreword written by Joe Armstrong this handbook offers an extensive tutorial for creating a state of the art Topology and Weight Evolving Artificial Neural Network TWEANN platform In a step by step format the reader is guided from a single simulated neuron to a complete system By following these steps the reader will be able to use novel technology to build a TWEANN system which can be applied to Artificial Life simulation and Forex trading Because of Erlang s architecture it perfectly matches that of evolutionary and neurocomputational systems As a programming language it is a concurrent message passing paradigm which allows the developers to make full use of the multi core multi cpu systems Handbook of Neuroevolution Through Erlang explains how to leverage Erlang s features in the field of machine learning and the system s real world applications ranging from algorithmic financial trading to artificial life and robotics

Evolutionary Robotics: From Algorithms To Implementations Ling-feng Wang, Kay Chen Tan, Chee-meng Chew, 2006-07-17 This invaluable book comprehensively describes evolutionary robotics and computational intelligence and how different computational intelligence techniques are applied to robotic system design It embraces the most widely used evolutionary approaches with their merits and drawbacks presents some related experiments for robotic behavior evolution and the results achieved and shows promising future research directions Clarity of explanation is emphasized such that a modest knowledge of basic evolutionary computation digital circuits and engineering design will suffice for a thorough

From Collective Beings to Quasi-Systems Gianfranco Minati, Eliano Pessa, 2018-01-29 This book outlines a possible future theoretical perspective for systemics its conceptual morphology and landscape while the Good Old Fashioned Systemics GOFs era is still under way The change from GOFs to future systemics can be represented as shown in the book title by the conceptual change from Collective Beings to Quasi systems With the current advancements problems and approaches occurring in contemporary science systemics are moving beyond the traditional frameworks used in the past From Collective Beings to Coherent Quasi Systems outlines a conceptual morphology and landscape for a new theoretical perspective for systemics introducing the concept of Quasi systems Advances in domains such as theoretical physics philosophy of science cell biology neuroscience experimental economics network science and many others offer new concepts and technical tools to support the creation of a fully transdisciplinary General Theory of Change This circumstance requires a deep reformulation of systemics without forgetting the achievements of established conventions The book is divided into two parts Part I examines classic systemic issues from new theoretical perspectives and approaches A new general unified framework is introduced to help deal with topics such as dynamic structural coherence and Quasi systems This new theoretical framework is compared and contrasted with the traditional approaches Part II focuses on the process of translation into social culture of the theoretical principles models and approaches introduced in Part I This translation is urgent in post industrial societies where emergent processes and problems are still dealt with by using the classical or non systemic knowledge of the industrial phase

*Models in Archaeology* David L. Clarke, 2014-10-24 This major study reflects the increasing significance of careful model formation and testing in those academic subjects that are struggling from intuitive and aesthetic obscurantism toward a more disciplined and integrated approach to their fields of study The twenty six original contributions represent the carefully selected work of progressive archaeologists around the world covering the use of models on archaeological material of all kinds and from all periods from Palaeolithic to Medieval Their common theme is archaeological generalisation by means of explicit model building testing modification and reapplication The contributors seek to show that it is the use of certain models in particular ways that defines archaeology as the practice of one discipline with a set of general tenets that are as applicable in Peru as in Persia Australia as Alaska Sweden as Scotland on material from the second millennium B C to the second millennium A D They assert that careful model formulation within archaeology and the cautious exchange and testing of models within and beyond the discipline provides the only route to the formation of the common internationally valid body of theory which defines a vigorous and coherent discipline and distinguishes it from being a collection of merely regionally applicable special cases
