Artificial War Multiagent Based Simulation Of Combat:

Artificial War: Multiagent-based Simulation Of Combat Andrew Ilachinski, 2004-06-14 Military conflicts particularly land combat possess the characteristics of complex adaptive systems combat forces are composed of a large number of nonlinearly interacting parts and are organized in a dynamic command and control network local action which often appears disordered self organizes into long range order military conflicts by their nature proceed far from equilibrium military forces adapt to a changing combat environment and there is no master voice that dictates the actions of every soldier i e battlefield action is decentralized Nonetheless most modern state of the art military simulations ignore the self organizing properties of combat This book summarizes the results of a multiyear research effort aimed at exploring the applicability of complex adaptive systems theory to the study of warfare and introduces a sophisticated multiagent based simulation of combat called EINSTEIN EINSTEIN whose bottom up generative approach to modeling combat stands in stark contrast to the top down or reductionist philosophy that still underlies most conventional military models is designed to illustrate how many aspects of land combat may be understood as self organized emergent phenomena Used worldwide by the military operations research community EINSTEIN has pioneered the simulation of combat on a small to medium scale by using autonomous agents to model individual behaviors and personalities rather than hardware

Engineering Principles of Combat Modeling and Distributed Simulation Andreas Tolk, 2012-03-20 Explore the military and combat applications of modeling and simulation Engineering Principles of Combat Modeling and Distributed Simulation is the first book of its kind to address the three perspectives that simulation engineers must master for successful military and defense related modeling the operational view what needs to be modeled the conceptual view how to do combat modeling and the technical view how to conduct distributed simulation Through methods from the fields of operations research computer science and engineering readers are guided through the history current training practices and modern methodology related to combat modeling and distributed simulation systems Comprised of contributions from leading international researchers and practitioners this book provides a comprehensive overview of the engineering principles and state of the art methods needed to address the many facets of combat modeling and distributed simulation and features the following four sections Foundations introduces relevant topics and recommended practices providing the needed basis for understanding the challenges associated with combat modeling and distributed simulation Combat Modeling focuses on the challenges in human social cultural and behavioral modeling such as the core processes of move shoot look and communicate within a synthetic environment and also equips readers with the knowledge to fully understand the related concepts and limitations Distributed Simulation introduces the main challenges of advanced distributed simulation outlines the basics of validation and verification and exhibits how these systems can support the operational environment of the warfighter Advanced Topics highlights new and developing special topic areas including mathematical applications fo combat modeling combat modeling with high level architecture and base object

models and virtual and interactive digital worlds Featuring practical examples and applications relevant to industrial and government audiences Engineering Principles of Combat Modeling and Distributed Simulation is an excellent resource for researchers and practitioners in the fields of operations research military modeling simulation and computer science Extensively classroom tested the book is also ideal for courses on modeling and simulation systems engineering and combat modeling at the graduate level *Computational Intelligence in Archaeology* Barcelo, Juan A.,2008-07-31 Provides analytical theories offered by innovative artificial intelligence computing methods in the archaeological domain Artificial Whiteness Yarden Katz,2020-11-17 Dramatic statements about the promise and peril of artificial intelligence for humanity abound as an industry of experts claims that AI is poised to reshape nearly every sphere of life Who profits from the idea that the age of AI has arrived Why do ideas of AI s transformative potential keep reappearing in social and political discourse and how are they linked to broader political agendas Yarden Katz reveals the ideology embedded in the concept of artificial intelligence contending that it both serves and mimics the logic of white supremacy He demonstrates that understandings of AI as a field and a technology have shifted dramatically over time based on the needs of its funders and the professional class that formed around it From its origins in the Cold War military industrial complex through its present day Silicon Valley proselytizers and eager policy analysts AI has never been simply a technical project enabled by larger data and better computing Drawing on intimate familiarity with the field and its practices Katz instead asks us to see how AI reinforces models of knowledge that assume white male superiority and an imperialist worldview Only by seeing the connection between artificial intelligence and whiteness can we prioritize alternatives to the conception of AI as an all encompassing technological force Bringing together theories of whiteness and race in the humanities and social sciences with a deep understanding of the history and practice of science and computing Artificial Whiteness is an incisive urgent critique of the uses of AI as a political tool to uphold social hierarchies Advanced Methods and Technologies for Agent and Multi-Agent Systems D. Barbucha,M.T. Le,R.J. Howlett,2013-05-14 The field of agent and multi agent systems is concerned with the development and evaluation of sophisticated AI based problem solving and control architectures for both single and multi agent systems This book presents the proceedings of the 7th KES Conference on Agent and Multi agent Systems Technologies and Applications KES AMSTA 2013 held in Hue City Vietnam in May 2013 The KES AMSTA 2013 conference provides an internationally respected forum for scientific research in the technologies and applications of agent and multi agent systems In all 44 papers were selected for oral presentation and publication in this volume Special attention is paid to the feature topics of intelligent technologies and applications in the area of e health social networking self organizing systems economics and trust management Other topics covered include agent oriented software engineering beliefs engineering desires and intentions representation agent cooperation coordination negotiation organization and communication distributed problem solving specification of agent communication languages formalization of ontologies and conversational agents The book highlights new trends and

challenges in agent and multi agent research and will be of interest to the research community working in the fields of artificial intelligence collective computational intelligence robotics dialogue systems and in particular agent and multi agent systems technologies and applications
