Artificial Dreams The Quest For Non Biological Intelligence:

Artificial Dreams H. R. Ekbia, 2008-04-21 This book is a critique of Artificial Intelligence AI from the perspective of cognitive science it seeks to examine what we have learned about human cognition from AI successes and failures The book's goal is to separate those AI dreams that either have been or could be realized from those that are constructed through discourse and are unrealizable AI research has advanced many areas that are intellectually compelling and holds great promise for advances in science engineering and practical systems After the 1980s however the field has often struggled to deliver widely on these promises This book breaks new ground by analyzing how some of the driving dreams of people practicing AI research become valued contributions while others devolve into unrealized and unrealizable projects

Artificial Dreams Hamid Reza Ekbia, 2014-05-14 **A Networked Self and Human Augmentics, Artificial Intelligence, Sentience** Zizi Papacharissi, 2018-07-11 Every new technology invites its own sets of hopes and fears and raises as many questions as it answers revolving around the same theme Will technology fundamentally alter the essence of what it means to be human This volume draws inspiration from the work of the many luminaries who approach augmented alternative forms of intelligence and consciousness Scholars contribute their thoughts on how human augmentic technologies and artificial or sentient forms of intelligence can be used to enable reimagine and reorganize how we understand our selves how we conceive the meaning of human and how we define meaning in our lives **Beyond Artificial Intelligence** Jozef Kelemen, Jan Romportl, Eva Zackova, 2012-10-20 Products of modern artificial intelligence AI have mostly been formed by the views opinions and goals of the insiders i.e. people usually with engineering background who are driven by the force that can be metaphorically described as the pursuit of the craft of Hephaestus However since the present day technology allows for tighter and tighter mergence of the natural everyday human life with machines of immense complexity the responsible reaction of the scientific community should be based on cautious reflection of what really lies beyond AI i.e. on the frontiers where the tumultuous ever growing and ever changing cloud of AI touches the rest of the world The chapters of this book are based on the selected subset of the presentations that were delivered by their respective authors at the conference Beyond AI Interdisciplinary Aspects of Artificial Intelligence held in Pilsen in December 2011 From its very definition the reflection of the phenomena that lie beyond AI must be inherently interdisciplinary And so is this book all the authors took part in a mutual transdisciplinary dialogue after explaining their views on AI not only to a narrow selection of their usual close peers with the same specialisation but to a much broader audience of various experts from AI engineering natural sciences humanities and philosophy The chapters of this book thus reflect results of such a dialogue **Artificial Intelligence and Soft Computing, Part II** Leszek Rutkowski, Rafał Scherer, Ryszard Tadeusiewicz, Lotfi A. Zadeh, Jacek M. Zurada, 2010-06 This volume constitutes the proceedings of the 10th International Conference on Artificial Intelligence and Soft Computing ICAISC 2010 held in Zakopane Poland in June 13-17 2010 The articles are organized in topical sections on Fuzzy Systems and
