Artificial Life Models In Software:

Artificial Life Models in Software Maciej Komosinski, Andrew Adamatzky, 2009-06-13 The advent of powerful processing technologies and the advances in software development tools have drastically changed the approach and implementation of computational research in fundamental properties of living systems through simulating and synthesizing biological entities and processes in artificial media Nowadays realistic physical and physiological simulation of natural and would be creatures worlds and societies becomes a low cost task for ordinary home computers The progress in technology has dramatically reshaped the structure of the software the execution of a code and visualization fundamentals This has led to the emergence of novel breeds of artificial life software models including three dimensional programmable simulation environment distributed discrete events platforms and multi agent systems This second edition reflects the technological and research advancements and presents the best examples of artificial life software models developed in the World and available for users

Artificial Life Models in Software Andrew Adamatzky, Maciej Komosinski, 2006-01-20 Artificial life is an interdisciplinary field of science hosting experts from computer science biology physics chemistry and mathematics as well as philosophers and artists It focuses on studying the phenomena of life on all levels of complexity and organization molecular cellular organismic and population These studies not only employ conventional computers using both software and hardware but also take place in wetware using techniques of biochemical laboratory Artificial life research is not limited to life forms existing on the Earth It rather attempts to study the general principles of life which are common to all instances of life both already recognized and yet unknown This book is dedicated to the software medium the most popular and widely employed in the artificial life research The software medium offers almost unlimited abilities for experiments which are cheap easily arranged and modified Additionally such experiments can be repeated under the same conditions and large amounts of data unavailable in biological studies can be collected for analysis To begin experimentation a model of life is required Such models are built in software for all organizational levels of life Most of the models described in this book are very general and therefore allow for a wide range of experiments

Man-Machine Interactions 4 Aleksandra Gruca, Agnieszka Brachman, Stanisław Kozielski, Tadeusz Czachórski, 2015-10-01 This book provides an overview of the current state of research on development and application of methods algorithms tools and systems associated with the studies on man machine interaction Modern machines and computer systems are designed not only to process information but also to work in dynamic environment supporting or even replacing human activities in areas such as business industry medicine or military The interdisciplinary field of research on man machine interactions focuses on broad range of aspects related to the ways in which human make or use computational artifacts systems and infrastructure This monograph is the fourth edition in the series and presents new concepts concerning analysis design and evaluation of man machine systems The selection of high quality original papers covers a wide scope of research topics focused on the main problems and challenges

encountered within rapidly evolving new forms of human machine relationships The presented material is structured into following sections human computer interfaces robot control embedded and navigation systems bio data analysis and mining biomedical signal processing image and motion data processing decision support and expert systems pattern recognition fuzzy systems algorithms and optimisation computer networks and mobile technologies and data management systems

Computers and Creativity Jon McCormack, Mark d'Inverno, 2012-08-21 This interdisciplinary volume introduces new theories and ideas on creativity from the perspectives of science and art Featuring contributions from leading researchers theorists and artists working in artificial intelligence generative art creative computing music composition and cybernetics the book examines the relationship between computation and creativity from both analytic and practical perspectives Each contributor describes innovative new ways creativity can be understood through and inspired by computers The book tackles critical philosophical questions and discusses the major issues raised by computational creativity including whether a computer can exhibit creativity independently of its creator what kinds of creativity are possible in light of our knowledge from computational simulation artificial intelligence evolutionary theory and information theory and whether we can begin to automate the evaluation of aesthetics and creativity in silico These important often controversial questions are contextualised by current thinking in computational creative arts practice Leading artistic practitioners discuss their approaches to working creatively with computational systems in a diverse array of media including music sound art visual art and interactivity The volume also includes a comprehensive review of computational aesthetic evaluation and judgement research alongside discussion and insights from pioneering artists working with computation as a creative medium over the last fifty years A distinguishing feature of this volume is that it explains and grounds new theoretical ideas on creativity through practical applications and creative practice Computers and Creativity will appeal to theorists researchers in artificial intelligence generative and evolutionary computing practicing artists and musicians students and any reader generally interested in understanding how computers can impact upon creativity It bridges concepts from computer science psychology neuroscience visual art music and philosophy in an accessible way illustrating how computers are fundamentally changing what we can imagine and create and how we might shape the creativity of the future Computers and Creativity will appeal to theorists researchers in artificial intelligence generative and evolutionary computing practicing artists and musicians students and any reader generally interested in understanding how computers can impact upon creativity It bridges concepts from computer science psychology neuroscience visual art music and philosophy in an accessible way illustrating how computers are fundamentally changing what we can imagine and create and how we might shape the creativity of the future

Handbook of Evolutionary Machine Learning Wolfgang Banzhaf, Penousal Machado, Mengjie Zhang, 2023-11-01 This book written by leading international researchers of evolutionary approaches to machine learning explores various ways evolution can address machine learning problems and improve current methods of machine learning Topics in this book are organized

into five parts The first part introduces some fundamental concepts and overviews of evolutionary approaches to the three different classes of learning employed in machine learning The second addresses the use of evolutionary computation as a machine learning technique describing methodologic improvements for evolutionary clustering classification regression and ensemble learning The third part explores the connection between evolution and neural networks in particular the connection to deep learning generative and adversarial models as well as the exciting potential of evolution with large language models The fourth part focuses on the use of evolutionary computation for supporting machine learning methods This includes methodological developments for evolutionary data preparation model parametrization design and validation The final part covers several chapters on applications in medicine robotics science finance and other disciplines Readers find reviews of application areas and can discover large scale real world applications of evolutionary machine learning to a variety of problem domains This book will serve as an essential reference for researchers postgraduate students practitioners in industry and all those interested in evolutionary approaches to machine learning

Agent-Based Models of Geographical Systems Alison J. Heppenstall, Andrew T. Crooks, Linda M. See, Michael Batty, 2011-11-24 This unique book brings together a comprehensive set of papers on the background theory technical issues and applications of agent based modelling ABM within geographical systems This collection of papers is an invaluable reference point for the experienced agent based modeller as well those new to the area Specific geographical issues such as handling scale and space are dealt with as well as practical advice from leading experts about designing and creating ABMs handling complexity visualising and validating model outputs With contributions from many of the world's leading research institutions the latest applied research micro and macro applications from around the globe exemplify what can be achieved in geographical context This book is relevant to researchers postgraduate and advanced undergraduate students and professionals in the areas of quantitative geography spatial analysis spatial modelling social simulation modelling and geographical information sciences
