Agent Based Ubiquitous Computing Atlantis Ambient And Pervasive Intelligence:

AGENT-BASED UBIQUITOUS COMPUTING Javier Carbo, 2010-06-01 Ubiquitous computing names the third wave in computing where the personal computing era appears when technology recedes into the background of our lives. The widespread use of new mobile technology implementing wireless communications such as personal digital assistants PDAs and smart phones enables a new type of advanced applications. In the past years, the main focus of research in mobile services has aimed at the anytime anywhere principle of ubiquitous computing. However, there is more to it. The increasing demand for distributed problem solving led to the development of multi agent systems. The latter are formed from a collection of independent software entities whose collective skills can be applied in complex and real time domains. The target of such systems is to demonstrate how goal directed robust and optimal behavior can arise from interactions between individual autonomous intelligent software agents. These software entities exhibit characteristics like autonomy, responsiveness, proactiveness and social ability. Their functionality and effectiveness has proven to be highly depended on the design and development and the application domain. In fact, in several cases, the design and development of effective services should take into account the characteristics of the context from which a service is requested. Context is the set of suitable environmental states and settings concerning a user which are relevant for a situation sensitive application in the process of adapting the services and formation offered to the user. Agent technology seems to be the right technology to offer the possibility of exploring the dynamic context of the user in order to provide added value services or to execute more and complex tasks.

Ubiquitous Computing and Ambient Intelligence: Personalisation and User Adapted Services

Ramón Hervás, Sungyoung Lee, Chris Nugent, José Bravo, 2014-11-10 This book constitutes the refereed proceedings of the 8th International Conference on Ubiquitous Computing and Ambient Intelligence UCAmI 2014 held in Belfast UK in December 2014. The 57 papers presented together with 7 papers of the workshop AmIUA 2014, 8 papers of the workshop IoT 2014, 7 papers of the workshop EUSPAI 2014 and 6 papers of the workshop VSS 2014 were carefully reviewed and selected from numerous submissions. The papers are grouped in topical sections on key application domains for ambient intelligence: human interaction in ambient intelligence, ICT instrumentation and middleware support for smart environments and objects, adding intelligence for environment adaption and security and privacy issues in AAL.

Trustworthy Ubiquitous Computing Ismail Khalil, Teddy Mantoro, 2012-09-13 Trustworthy Ubiquitous Computing covers aspects of trust in ubiquitous computing environments. The aspects of context, privacy, reliability, usability and user experience related to emerged and exciting new computing paradigm of Ubiquitous Computing includes pervasive grid and peer to peer computing including sensor networks to provide secure computing and communication services at anytime and anywhere. Marc Weiser presented his vision of disappearing and ubiquitous computing more than 15 years ago. The big picture of the computer introduced into our environment was a big innovation and the starting point for various areas of research. In order to totally adopt the idea of

ubiquitous computing several houses were build equipped with technology and used as laboratory in order to find and test appliances that are useful and could be made available in our everyday life Within the last years industry picked up the idea of integrating ubiquitous computing and already available products like remote controls for your house were developed and brought to the market In spite of many applications and projects in the area of ubiquitous and pervasive computing the success is still far away One of the main reasons is the lack of acceptance of and confidence in this technology Although researchers and industry are working in all of these areas a forum to elaborate security reliability and privacy issues that resolve in trustworthy interfaces and computing environments for people interacting within these ubiquitous environments is important The user experience factor of trust thus becomes a crucial issue for the success of a UbiComp application The goal of this book is to provide a state the art of Trustworthy Ubiquitous Computing to address recent research results and to present and discuss the ideas theories technologies systems tools applications and experiences on all theoretical and practical issues

Activity Recognition in Pervasive Intelligent Environments Liming Chen,Chris D. Nugent,Jit Biswas,Jesse Hoey,2011-05-04 This book consists of a number of chapters addressing different aspects of activity recognition roughly in three main categories of topics The first topic will be focused on activity modeling representation and reasoning using mathematical models knowledge representation formalisms and AI techniques The second topic will concentrate on activity recognition methods and algorithms Apart from traditional methods based on data mining and machine learning we are particularly interested in novel approaches such as the ontology based approach that facilitate data integration sharing and automatic automated processing In the third topic we intend to cover novel architectures and frameworks for activity recognition which are scalable and applicable to large scale distributed dynamic environments In addition this topic will also include the underpinning technological infrastructure i e tools and APIs that supports function capability sharing and reuse and rapid development and deployment of technological solutions The fourth category of topic will be dedicated to representative applications of activity recognition in intelligent environments which address the life cycle of activity recognition and their use for novel functions of the end user systems with comprehensive implementation prototyping and evaluation This will include a wide range of application scenarios such as smart homes intelligent conference venues and cars
