Recent Advances in Intelligent Engineering Systems János Fodor, Ryszard Klemous, Carmen Paz Suárez Araujo, 2011-09-25. This volume is a collection of 19 chapters on intelligent engineering systems written by respectable experts of the fields. The book consists of three parts. The first part is devoted to the foundational aspects of computational intelligence. It consists of 8 chapters that include studies in genetic algorithms, fuzzy logic connectives, enhanced intelligence in product models, nature-inspired optimization technologies, particle swarm optimization, evolution algorithms, model complexity of neural networks, and fitness landscape analysis. The second part contains contributions to intelligent computation in networks presented in 5 chapters. The covered subjects include the application of self-organizing maps for early detection of denial of service attacks, combating security threats via immunity and adaptability in cognitive radio networks, novel modifications in WSN network design for improved SNR and reliability, a conceptual framework for the design of audio-based cognitive infocommunication channels, and a case study on the advantages of fuzzy and anytime signal and image processing techniques. Computational intelligence represents a widely spread interdisciplinary research area with many applications in various disciplines, including engineering, medicine, technology, and environment, among others. Therefore, the third part of this book consists of 6 chapters on applications. This is a very important part of the volume because the reader can find in it a wide range of fields where computational intelligence plays a significant role.

Artificial Intelligence Research and Development Francisco Grimaldo, Tommaso Flaminio, 2022-11-15. Artificial intelligence has become an integral part of all our lives. Development is rapid in this exciting and far-reaching field, and keeping up to date with the latest research and innovation is crucial to all those working with the technology. This book presents the proceedings of the 24th edition of CCIA, the International Conference of the Catalan Association for Artificial Intelligence, held in Sitges, Spain, from 19-21 October 2022. This annual event serves as a meeting point not only for researchers in AI from the Catalan-speaking territories, southern France, Catalonia, Valencia, the Balearic Islands, and Alghero in Italy, but for researchers from around the world. The programme committee received 59 submissions from which the 26 long papers and 23 short papers were selected for presentation at the conference by the 62 experts who make up the committee. These are included here. The book is divided into the following sections: combinatorial problem solving and logics for artificial intelligence, sentiment analysis and text analysis, data science, recommender systems, and decision support systems, machine learning, computer vision, and explainability and argumentation. This book also includes an abstract of the invited talk given

by Prof Fosca Giannotti Providing a comprehensive overview of research and development this book will be of interest to all those working in the field of Artificial Intelligence
