developers could just code their programs once and allow those programs run anywhere or at least in most platforms as long as those platforms allow Java code to run in them Java primarily uses some of the same elements that C and C++ use but transforms them into much simpler easy to understand versions that could also be modified depending on the developer's preferences Java has also been created to run with enough runtime support both for hardware and software by means of representing each bytecode in a clear and concise manner For example shih tzus border collies and terriers are all dogs therefore they could all be classified as dogs and thus not a lot of space would be taken up in the system and the system would be able to work in a fast manner This is also the reason why Java is one of the world's most powerful and most used programming languages of all time Grab your copy today
