The Future of National Intelligence Shay HersHKovitz, 2022-10-15 National intelligence agencies have long adjusted to the opportunities and threats from new technologies and have created structures concepts and practices to best apply new capabilities But such recent technological developments as artificial intelligence are different in kind Increasingly affordable to nongovernmental actors they are powerful enough to overwhelm and marginalize much of what agencies do In The Future of National Intelligence How Emerging Technologies Reshape Intelligence Communities Shay HersHKovitz argues that only with a new paradigm can these agencies take up this fundamentally new technological challenge

Developing Intelligence Theory Peter Gill, Stephen Marrin, Mark Phythian, 2020-06-04 Developing Intelligence Theory analyses the current state of intelligence theorisation provides a guide to a range of approaches and perspectives and points towards future research agendas in this field Key questions discussed include the role of intelligence theory in organising the study of intelligence how and how far explanations of intelligence have progressed in the last decade and how intelligence theory should develop from here Significant changes have occurred in the security intelligence environment in recent years including transformative information technologies the advent of new terrorism and the emergence of hybrid warfare making this an opportune moment to take stock and consider how we explain what intelligence does and how The material made available via the 2013 Edward Snowden leaks and subsequent national debates has contributed much to our understanding of contemporary intelligence processes and has significant implications for future theorisation for example in relation to the concept of surveillance The contributors are leading figures in Intelligence Studies who represent a range of different approaches to conceptual thinking about intelligence As such their contributions provide a clear statement of the current parameters of debates in intelligence theory while also pointing to ways in which the study of intelligence continues to develop This book was originally published as a special issue of Intelligence and National Security

one of the justifications for their rollout of the social credit system Counter terrorism technologies can easily succumb to mission creep where a technology's exceptional application becomes normalized and rolled out to society more generally This collection is not just timely but an important contribution to understand the ethics of counter terrorism and technology and has far wider implications for societies and nations around the world

Guide to Maritime Informatics Alexander Artikis,Dimitris Zissis,2021-02-08 In the last 25 years information systems have had a disruptive effect on society and business Up until recently though the majority of passengers and goods were transported by sea in many ways similar to the way they were at the turn of the previous century Gradually advanced information technologies are being introduced in an attempt to make shipping safer greener more efficient and transparent The emerging field of Maritime Informatics studies the application of information technology and information systems to maritime transportation Maritime Informatics can be considered as both a field of study and domain of application As an application domain it is the outlet of innovations originating from data science and artificial intelligence as a field of study it is positioned between computer science and marine engineering This new field s complexity lies within this duality because it is faced with disciplinary barriers yet demands a systemic transdisciplinary approach At present there is a growing body of knowledge that remains undocumented in a single source or textbook designed to assist students and practitioners This highly useful textbook reference starts by introducing required knowledge algorithmic approaches and technical details before presenting real world applications The aim is to present interested

audiences with an overview of the main technological innovations having a disruptive effect on the maritime industry as well as to discuss principal ideas methods of operation and applications and future developments The material in this unique volume provides requisite core knowledge for undergraduate or postgraduate students employing an analytical approach with numerous real world examples and case studies
