topics There is a total of 21 chapters in this textbook covering topics ranging from an introduction to biotechnology genes to genomics protein to proteomics recombinant DNA technology microbial biotechnology agricultural biotechnology animal biotechnology environmental biotechnology medical biotechnology nanobiotechnology product development in biotechnology industrial biotechnology forensic science regenerative medicine biosimilars synthetic biology biomedical engineering computational biology ethics in biotechnology careers in biotechnology and laboratory tutorials All chapters begin with a brief summary followed by text with suitable examples Each chapter illustrated by simple line diagrams pictures and tables Each chapter concludes with a question session assignment and field trip information I have included laboratory tutorials as a separate chapter to expose the students to various laboratory techniques and laboratory protocols This practical information would be an added advantage to the students while they learn the theoretical aspects of biotechnology
