The American Bird Conservancy Guide to Bird Conservation Daniel J. Lebbin, Michael J. Parr, George H. Fenwick, 2010-10-15 Whether we live in cities in the suburbs or in the country birds are ubiquitous features of daily life so much so that we often take them for granted But even the casual observer is aware that birds don't fill our skies in the number they once did That awareness has spawned conservation action that has led to notable successes including the recovery of some of the nation's most emblematic species such as the Bald Eagle Brown Pelican Whooping Crane and Peregrine Falcon Despite this a third of all American bird species are in trouble in many cases they're in imminent danger of extinction The most authoritative account ever published of the threats these species face *The American Bird Conservancy Guide to Bird Conservation* will be the definitive book on the subject The Guide presents for the first time anywhere a classification system and threat analysis for bird habitats in the United States the most thorough and scientifically credible assessment of threats to birds published to date as well as a new list of birds of conservation concern Filled with beautiful color illustrations and original range maps the Guide is a timely important and inspiring reference for birders and anyone else interested in conserving North America's avian fauna But this book is far more than another shout of crisis The Guide also lays out a concrete and achievable plan of long term action to safeguard our country's rich bird life Ultimately it is an argument for hope Whether you spend your early weekend mornings crouched in silence with binoculars in hand hoping to check another species off your list or you've never given much thought to bird conservation you'll appreciate the visual power and intellectual scope of these pages

Boreal Birds of North America Jeffrey V. Wells, 2011-11-15 A wonderful book that highlights the globally unique and important boreal forest ecoregion from an avian perspective with fresh twists Your ideas about where those migrant and wintering birds in your backyards have come from will be forever changed after you

read this Gordon Orians Professor Emeritus of Biology University of Washington One of the planet's most amazing spectacles is the seasonal ebb and flow of migrants from the boreal forests to warmer winter quarters with stopovers in our neighborhoods in between This book tells you how connected the world is and what's at risk if we damage any part of it Stuart Pimm Doris Duke Professor of Conservation Ecology Duke University winner of the 2006 Dr A H Heineken Prize This diverse set of contributions about birds that nest in and migrate to and from North America's boreal forest demonstrates the remarkable interconnectedness of ecosystems across the hemispheres and the incredible responsibility we face to protect them Bridget Stutchbury York University author of *Silence of the Songbirds* and *The Private Lives of Birds* The fact that billions of birds breed in North America's boreal forest is amazing enough but this assemblage is even more remarkable when understood as playing completely different major ecological roles across the temperate and tropical Americas during the northern winter This book definitely will broaden your thinking about ecological connections across the hemisphere and the global scale phenomenon that crosses our skies twice each year John W Fitzpatrick Louis Agassiz Fuertes Director Cornell Lab of Ornithology
