Learning Objectives

- LO1** Describe the goals of taxonomic classification and nomenclature.
- LO2** Identify the levels of the classification system derived by Linnaeus.

Learning Objectives

Assigning Scientific Names By using Linnaeus's system of nomenclature, biologists assign the most appropriate names. Biologists also use nomenclature to group organisms based on their relationships. Biologists use a hierarchical system. The concept of naming and grouping organisms is called **taxonomy**.

For example, Linnaeus classified *Linnaea* developed a naming system, called **binomial nomenclature**, to describe plants. Each species is assigned a two-part scientific name.

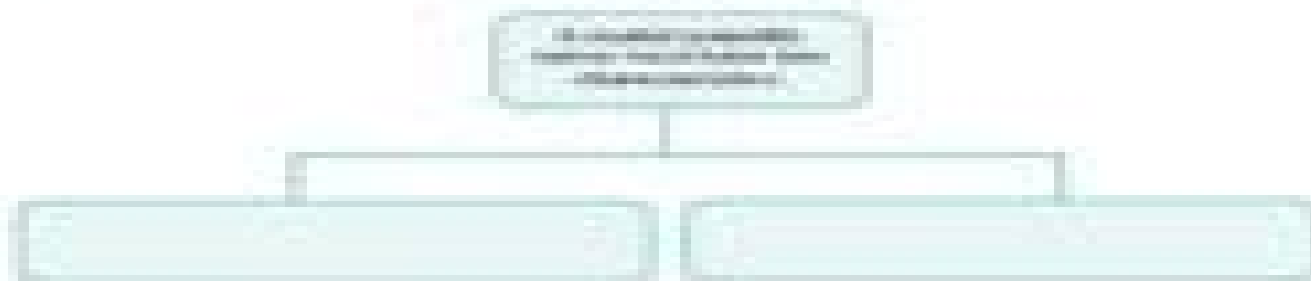

- The first part of the name refers to the genus, or a group of similar species.
- The second part of the name is unique to each species.

Linnaeus's Classification System Linnaeus's system of classification has seven different levels. Biologists use Linnaeus's hierarchy to describe and group species. Family, order, class, phylum, and kingdom. Each of the ranking levels is called a **taxon**.

- Genus is a group of similar species, a family is a group of similar genera.
- An order is a group of similar families.
- A class is a group of similar orders.
- A phylum is a group of similar classes.
- A kingdom is a group of similar phyla.
