Monthly Catalog of United States Government Publications, 1993 Resources in education, 1991 *The Geometry of Genocide* Bradley Campbell, 2015-10-29 In *The Geometry of Genocide* Bradley Campbell argues that genocide is best understood not as deviant behavior but as social control a response to perceived deviant behavior on the part of victims Using Donald Black's method of pure sociology Campbell considers genocide in relation to three features of social life diversity inequality and intimacy According to this theory genocidal conflicts begin with changes in diversity and inequality such as when two previously separated ethnic groups come into contact or when a subordinate ethnic group attempts to rise in status Further conflicts are more likely to result in genocide when they occur in a context of social distance and inequality and when aggressors and victims cannot be easily separated Campbell applies his approach to five cases the killings of American Indians in 1850s California Muslims in 2002 India and 1992 Bosnia Tutsis in 1994 Rwanda and Jews in 1940s Europe These case studies which focus in detail on particular incidents within each instance of genocide demonstrate the theory's ability to explain an array of factors including why genocide occurs and who participates Campbell's theory uniquely connects the study of genocide to the larger study of conflict and social control By situating genocide among these broader phenomena *The Geometry of Genocide* provides a novel and compelling explanation of genocide while furthering our understanding of why humans have conflicts and why they respond to conflict as they do *Nuclear Science Abstracts*, 1973
Public Health Engineering Abstracts United States. Public Health Service, 1954 **Functional Polymers in Food Science** Giuseppe Cirillo, Umile Gianfranco Spizzirri, Francesca Iemma, 2015-03-18 Polymers are an important part in everyday life products made from polymers range from sophisticated articles such as biomaterials to aerospace materials One of the reasons for the great popularity exhibited by polymers is their ease of processing Polymer properties can be tailored to meet specific needs by varying the atomic composition of the repeat structure by varying molecular weight and by the incorporation via covalent and non covalent interactions of an enormous range of compounds to impart specific activities In food science the use of polymeric materials is widely explored from both an engineering and a nutraceutical point of view Regarding the engineering application researchers have discovered the most suitable materials for intelligent packaging which preserves the food quality and prolongs the shelf life of the products Furthermore in agriculture specific functionalized polymers are used to increase the efficiency of treatments and reduce the environmental pollution In the nutraceutical field because consumers are increasingly conscious of the relationship between diet and health the consumption of high quality foods has been growing continuously Different compounds e.g. high quality proteins lipids and polysaccharides are well

known to contribute to the enhancement of human health by different mechanisms reducing the risk of cardiovascular disease coronary disease and hypertension This first volume of this two volume book concerns the application of polymers in food packaging
