

## ***Biostatistics Study Guide***

### ***Learning Objectives***

- Determine if a variable is nominal, ordinal, interval, or ratio
  - *Definition:* variable is anything that is observed/measured in a clinical experiment
    - **Nominal:** categories in no particular order, ex. Race, gender
    - **Ordinal:** categories in order, but the distances between values are not equal, ex. Stages of cancer
    - **Interval:** continuous data, equal distances between values, but zero point is arbitrary, ex. temperature
    - **Ratio:** continuous data, equal distances between values, but zero is a true zero (most common number-based value), ex. Height, weight
- Recognize dichotomous and continuous endpoints
  - **Dichotomous endpoints:** nominal data with only 2 options – reported as n (%)
  - **Continuous endpoints:** usually reported as mean  $\pm$  standard deviation (or median  $\pm$  interquartile range)
- Given a mean and SD of a normally distributed sample, calculate the range that 95% of the data points lie between
  - Measures of dispersion: how closely data cluster around the measure of central tendency
  - Interquartile range: difference between 25th and 75th percentiles
  - Advantage = not affected by outliers
  - Standard deviation: estimates data variability by the scatter of data points about the sample mean
  - Mean  $\pm$  2 SDs = range of values that 95% of the data points lie between
- Interpret a p value, with respect to the alpha of the study and risk of type I error
  - **Type I error:** false positive (false statistically significant difference)
  - **Alpha:** the acceptable probability that the difference seen between the experimental and control groups is due to chance alone, (usually 0.05 or 5%)
  - **P value:** the actual probability that difference seen in experimental and control groups is due to chance alone - after data are collected
- Given clinical study results, identify statistically significant differences between groups
  - If the p value is  $<$  alpha, the difference seen is statistically significant (or not due to chance alone)
- Explain how various factors affect the power of a study
  - Sample size increases, power increases
  - Study duration increases, power increase
