I. Glass: A Tribute and Memorial Kazuyoshi Takayama, Ozer Igra, 2012-10-16 The book provides personal memories along with description of scientific works written by ex graduate students and research associates of the late Professor Glass The described research work covers a wide range of shock wave phenomena resulting from seeds planted by Professor Glass Professor Glass was born in Poland in 1918 He immigrated together with his parents to Canada at the age of 12 and received all his professional education at the University of Toronto Canada He became a world recognized expert in shock wave phenomena and during his 45 years of active research he supervised more than 125 master and doctoral students post doctoral fellows and visiting research associates In this book seven of his past students research associates describe their personal memories of Professor Glass and present some of their investigations in shock wave phenomena which sprung from their past work with Professor Glass Specifically these investigations include underwater shock waves shock bubble interaction medical applications of shock wave various types of shock tubes and shock tube techniques shock wave attenuation and different types of shock wave reflections Shock Wave Science and Technology Reference Library, Vol. 2 Y. Horie, 2010-02-12 This book is the first of several volumes on solids in the Shock Wave Science and Technology Reference Library This is a unique collection and the library as a whole sets out to comprehensively and authoritatively cover and review at research level the subject matter with all its ramifications All the chapters are self contained and can be read independently of each other though they are of course thematically interrelated **Shock Waves Science and Technology Library, Vol. 6** F. Zhang, 2012-03-19 This book as a volume of the Shock Wave Science and Technology Reference Library is primarily concerned with the fundamental theory of detonation physics in gaseous and condensed phase reactive media The detonation process involves complex chemical reaction and fluid dynamics accompanied by intricate effects of heat light electricity and magnetism a contemporary research field that has found wide applications in propulsion and power hazard prevention as well as military engineering The seven extensive chapters contained in this volume are Chemical Equilibrium Detonation S Bastea and LE Fried Steady One

 Solids Volumes in the Shock Wave Science and Technology Reference Library These volumes are primarily concerned with
 high pressure shock waves in solid media including detonation and high velocity impact and penetration events This volume
 contains four articles The first two describe the reactive behavior of condensed phase explosives and the remaining two
 discuss the inert mechanical response of solid materials The articles are each self contained and can be read independently of
 each other They offer a timely reference for beginners as well as professional scientists and engineers covering the foundations
 and the latest progress and include burgeoning development as well as challenging unsolved problems The first chapter by S
 Sheild and R Engelke discusses the shock initiation and detonation phenomena of solids explosives The article is an
 outgrowth of two previous review articles Explosives in vol 6 of Encyclopedia of Applied Physics VCH 1993 and Initiation and
 Propagation of Detonation in Condensed Phase High Explosives in High Pressure Shock Compression of Solids III Springer

 phase detonation The authors emphasize the point that detonation is not an uncontrollable chaotic event but that it is an
 orderly event that is governed by and is describable in terms of the conservation of mass momentum energy and certain
 material specific properties of the explosive **Shock Wave Science and Technology Reference Library, Vol. 3** Yasuyuki
