environmental systems explains how these systems function and offers strategies on how to best manage them Includes the most important problems and solutions facing environmental management today Towards the rational use of high salinity tolerant plants Helmut Lieth,A.A. Al Masoom,2012-12-06 The Symposium on high salinity tolerant plants held at the University of Al Ain in December 1990 dealt primarily with plants tolerating salinity levels exceeding that of ocean water and which at the same time are promising for utilization in agriculture or forestry These plants could be very useful for a country like the UAE where fresh water resources are very scarce and the groundwater available at some places is already very salty More than 60 million woody trees shrubs have been planted so far and more are planned for the inland plains underlain with brackish groundwater These species were no solution for the widely barren shoreline of the UAE Here mangrove species were of potential use and one species *Avicennia Marina* occurs widely and has been successfully planted for about a decade Converting the tree plantations into economically useful cropping systems is still a problem requiring much research and development The book deals in several sections with conventional irrigation systems using marginal water The species used in these systems are mostly hybrids of conventional crops The irrigation systems however have similar problems as may be expected for irrigation with seawater Papers show the participants experiments in this area The volume serves as a link between scientists working for the improvement of classical irrigation systems and those interested in the application of a new dimension of salinity levels for irrigation water *Salinity: Environment — Plants — Molecules* André Läuchli,Ulrich Lüttge,2007-05-08 In biology the very big global and the very small molecular issues currently appear to be in the limelight of public interest and research funding policies They are in danger of drifting apart from each other They apply very coarse and very fine scaling respectively but coherence is lost when the various intermediate levels of different scales are neglected Regarding SALINITY we are clearly dealing with a global problem which due to progressing salinization of arable land is of vital interest for society Explanations and basic understanding as well as solutions and remedies may finally lie at the molecular level It is a general approach in science to look for understanding of any system under study at the next finer or lower level of scaling This in itself shows that we need a whole ladder of levels with increasingly finer steps from the global impact to the molecular bases of SALINITY relations It is in this vein that the 22 chapters of this book aim at providing an integrated view of SALINITY
