Marion, 1999 The collection of 72 articles offers the mathematics teacher suggestions for assessing testing and grading teaching efficacy how departments place students into courses the effectiveness of the major and the quantitative literacy of the graduating students Lacks an index Annotation c Book New MAA Notes , 1983 *The Scholarship of Teaching and Learning* Jacqueline Dewar, Curtis Bennett, Matthew A. Fisher, 2018-04-26 The Scholarship of Teaching and Learning A Guide for Scientists Engineers and Mathematicians shows college and university faculty members how to draw on their disciplinary knowledge and teaching experience to investigate questions about student learning It takes readers all the way through the inquiry process beginning with framing a research question and selecting a research design moving on to gathering and analyzing evidence and finally to making the results public Numerous examples are provided at each stage many from published studies of teaching and learning in science engineering or mathematics At strategic points short sets of questions prompt readers to pause and reflect plan or act These questions are derived from the authors experience leading many workshops in the United States and Canada on how to do the scholarship of teaching and learning SoTL The taxonomy of SoTL questions What works What is What could be that emerged from the SoTL studies undertaken by scholars in the Carnegie Academic for the Scholarship of Teaching and Learning serves as a framework at many stages of the inquiry process The book addresses the issue of evaluating and valuing this work including implications for junior faculty who wish to engage in SoTL The authors explain why SoTL should be of interest to STEM science technology engineering and mathematics faculty at all types of higher education institutions including faculty members active in traditional STEM research They also give their perspective on the benefits of SoTL to

faculty to their institutions to the academy and to students Doing the Scholarship of Teaching and Learning in Mathematics Jacqueline M. Dewar, Curtis D. Bennett, 2014-11-03 The Scholarship of Teaching and Learning SoTL movement encourages faculty to view teaching problems as invitations to conduct scholarly investigations In this growing field of inquiry faculty bring their disciplinary knowledge and teaching experience to bear on questions of teaching and learning They systematically gather evidence to develop and support their conclusions The results are to be peer reviewed and made public for others to build on This Notes volume is written expressly for collegiate mathematics faculty who want to know more about conducting scholarly investigations into their teaching and their students learning Envisioned and edited by two mathematics faculty the volume serves as a how to guide for doing SoTL in mathematics **Mapping Equity and Quality in Mathematics Education** Bill Atweh, Mellony Graven, Walter Secada, Paola Valero, 2011-01-06 Concerns about quality mathematics education are often posed in terms of the types of mathematics that are worthwhile and valuable for both the student and society in general and about how to best support students so that they can develop this mathematics Concerns about equity are about who is excluded from the opportunity to develop quality mathematics within our current practices and systems and about how to remove social barriers that systematically disadvantage those students This collection of chapters summarises our learning about the achievement of both equity and quality agendas in mathematics education and to move forward the debate on their importance for the field **Educational Measurement and Evaluation** Dr. Goldy Gupta, 2020-12-21 **Research in Collegiate Mathematics Education VII** Fernando Hitt, Derek Allan Holton, Patrick W. Thompson, 2010-03-05 The present volume of Research in Collegiate Mathematics Education like previous volumes in this series reflects the importance of research in mathematics education at the collegiate level The editors in this series encourage communication between mathematicians and mathematics educators and as pointed out by the International Commission of Mathematics Instruction ICMI much more work is needed in concert with these two groups Indeed editors of RCME are aware of this need and the articles published in this series are in line with that goal Nine papers constitute this volume The first two examine problems students experience when converting a representation from one particular system of representations to another The next three papers investigate students learning about proofs In the next two papers the focus is instructor knowledge for teaching calculus The final two papers in the volume address the nature of conception in mathematics Whether they are specialists in education or mathematicians interested in finding out about the field readers will obtain new insights about teaching and learning and will take away ideas that they can use **The American Mathematical Monthly**, 2008
