Associative Learning For A Robot Intelligence Artificial Intelligence:

Associative Learning For A Robot Intelligence John H Andrae,1998-09-22 The explanation of brain functioning in terms of the association of ideas has been popular since the 17th century Recently however the process of association has been dismissed as computationally inadequate by prominent cognitive scientists In this book a sharper definition of the term association is used to revive the process by showing that associative learning can indeed be computationally powerful Within an appropriate organization associative learning can be embodied in a robot to realize a human like intelligence which sets its own goals exhibits unique unformalizable behaviour and has no hidden homunculi Some believe that artificial intelligence is undergoing a paradigm shift There are undoubtedly several competing ideas and ideals Neural networks and dynamic systems are offered as alternatives to the information processing and digital computer models of the brain One is asked to decide between symbolic and subsymbolic between algorithmic and nonalgorithmic and between information processing and interactive systems Even in the short distance travelled in this book associative learning is seen to embrace both sides of these dichotomies

Associative Learning for a Robot Intelligence John Hugh Andrae,1998-01-01 provides a number of implementation details that will be helpful to anyone following up on PURR PUSS PP The book has an excellent index and a substantial bibliography Computing Reviews 1999

An AGI Brain for a Robot John H. Andreae, 2021-03-04 An AGI Brain for a Robot is the first and only book to give a detailed account and practical demonstration of an Artificial General Intelligence AGI The brain is to be implemented in fast parallel hardware and

embodied in the head of a robot moving in the real world Associative learning is shown to be a powerful technique for novelty seeking language learning and planning This book is for neuroscientists robot designers psychologists philosophers and anyone curious about the evolution of the human brain and its specialized functions The overarching message of this book is that an AGI as the brain of a robot is within our grasp and would work like our own brains The featured brain called PP is not a computer program Instead PP is a collection of networks of associations built from J A Fodor s modules and the author s groups The associations are acquired by intimate interaction between PP in its robot body and the real world Simulations of PP in one of two robots in a simple world demonstrate PP learning from the second robot which is under human control Both Professor Daniel C Dennett and Professor Michael A Arbib independently likened the book An AGI Brain for a Robot to Valentino Braitenberg s 1984 book Vehicles Experiments in Synthetic Psychology Daniel C Dennett Professor of Philosophy and Director of Center for Cognitive Studies Tufts University Author of From Bacteria to Bach and Back The Evolution of Minds Michael Arbib a long time expert in brain modeling observed that sometimes a small book can catch the interest of readers where a large book can overwhelm and turn them away He noted in particular the success of Valentino Braitenberg s Vehicles for which he wrote the foreword At a time of explosive interest in AI he suggests that PP and its antics may be just the right way to ease a larger audience into thinking about the technicalities of creating general artificial intelligence Michael A Arbib Professor Emeritus of Computer Science Biomedical Engineering Biological Sciences and Psychology University of Southern California Author of How the Brain Got Language Robots seem to increasingly invade our lives to the point that sometimes seems threatening and other worldly In this small book John Andreae shows some of the basic principles of robotics in ways that are entertaining and easily understood and touch on some of the basic questions of how the mind works Michael C Corballis Professor of Psychology University of Auckland Author of The Recursive Mind A little book that punches far beyond its weight Nicholas Humphrey Emeritus Professor of Psychology London School of Economics Author of Soul Dust The Magic of Consciousness A bold and rich approach to one of the major challenges for neuroscience robotics and philosophy Who will take up Andreae s challenge and implement his model Matthew Cobb Professor of Zoology University of Manchester Author of The Idea of the Brain Here is a book that could change the direction of research into artificial general intelligence in a very productive and profitable way It describes a radical new theory of the brain that goes some way towards answering many difficult questions concerning learning planning language and even consciousness Almost incredibly the theory is operational and expressed in a form that could and should inspire future novel research in AI that transcends existing paradigms Ian H Witten Professor of Computer Science Waikato University Author with Eibe Frank of Data Mining Practical Machine Learning Tools and Techniques Towards Service Robots for Everyday Environments Erwin Prassler,Rainer Bischoff,Wolfram Burgard,Robert Haschke,Martin Hägele,Gisbert Lawitzky,Bernhard Nebel,Paul Plöger,Ulrich Reiser,Marius Zöllner,2012-03-14 People have dreamed of machines which would free them from unpleasant

dull dirty and dangerous tasks and work for them as servants for centuries if not millennia Service robots seem to finally let these dreams come true But where are all these robots that eventually serve us all day long day for day A few service robots have entered the market domestic and professional cleaning robots lawnmowers milking robots or entertainment robots Some of these robots look more like toys or gadgets rather than real robots But where is the rest This is a question which is asked not only by customers but also by service providers care organizations politicians and funding agencies The answer is not very satisfying Today s service robots have their problems operating in everyday environments This is by far more challenging than operating an industrial robot behind a fence There is a comprehensive list of technical and scientific problems which still need to be solved To advance the state of the art in service robotics towards robots which are capable of operating in an everyday environment was the major objective of the DESIRE project Deutsche Service Robotik Initiative Germany Service Robotics Initiative funded by the German Ministry of Education and Research BMBF under grant no 01IME01A This book offers a sample of the results achieved in DESIRE

The Biology and Technology of Intelligent Autonomous Agents Luc Steels, 2012-12-06 The NATO sponsored Advanced Study Institute The Biology and Technology of Intelligent Autonomous Agents was an extraordinary event For two weeks it brought together the leading proponents of the new behavior oriented approach to Artificial Intelligence in Castel Ivano near Trento The goal of the meeting was to establish a solid scientific and technological foundation for the field of intelligent autonomous agents with a bias towards the new methodologies and techniques that have recently been developed in Artificial Intelligence under the strong influence of biology Major themes of the conference were bottom up AI research artificial life neural networks and techniques of emergent functionality The meeting was such an extraordinary event because it not only featured very high quality lectures on autonomous agents and the various fields feeding it but also robot laboratories which were set up by the MIT AI laboratory with a lab led by Rodney Brooks and the VUB AI laboratory with labs led by Tim Smithers and Luc Steels This way the participants could also gain practical experience and discuss in concreto what the difficulties and achievements were of different approaches In fact the meeting has been such a success that a follow up meeting is planned for September 1995 in Monte Verita Switzerland This meeting is organised by Rolf Pfeifer University of Zurich
