Dynamic Range Compressor Ear Training Denis Martin, 2020 Traditionally audio enthusiasts looking to enter the field of sound recording have been trained via a master apprentice relationship However in recent decades a large number of institutions have started to offer training in audio engineering at the post secondary level Students are expected to develop their skills during two to four year programs that would have normally been acquired through five to ten year apprenticeships As part of their training students must learn to operate and audibly recognize the effects of a variety of audio signal processors The following work involved creating testing and reporting on the efficacy of a training method and its associated tools for an important and often misunderstood processor the dynamic range compressor DRC The focused development of the critical listening skills required to recognize these audible effects is called technical ear training TET Past research has resulted in training methodologies for a variety of common audio attributes spectral content spatial attributes reverberation distortion noise loudness MP3 artifacts and dynamic range Research into the efficacy of these methodologies is limited but suggests participants improve with increasing training Overall continuous development and validation of methodologies for DRC TET have received little previous work The DRC TET program created in this study was used to train a group of eight audio engineering technology students over a period of one year Analysis of the training data revealed that the students improved over the training period at a rate similar to those reported by other researchers A series of pre post training listening tests were also administered to measure improvement on a set of nearly related listening tasks including a control group and professional group for reference The trained students successfully transferred the skills learned to a real world mixing task while the control group did not The trained students also outperformed the professional group Overall it was determined that this DRC TET program was successful Students improved in their understanding of DRC operation and their ability to detect and quantify audible DRC effects The software and listening test results presented in this thesis should be useful for educators training audio engineers and a variety of other professionals researchers training listening test participants

acoustic engineers electrical engineers musicians producers composers and more *Critical Listening Skills for Audio Professionals* Frederick Alton Everest, 2007 Audio productions are made or broken by the quality of the recording engineer's ears. The ability to properly discern sounds, identify subtle problems and act accordingly to apply the necessary fix makes all the difference in the quality of the final tracks and master. The good news is that these crucial skills can be learned. The ability to instantly identify frequencies, hear hidden distortions and instinctively reconcile conflicts in the EQ of instruments, audio elements, vocals and more are traits of those who have mastered the art of audio production. The best engineers have trained their ears to immediately recognize audio problems that the consumer and those new to recording arts would likely not hear but that if left unresolved would result in an amateurish final product. For more than two decades students of F Alton Everest's Critical Listening and Auditory Perception courses have rapidly developed these skills by using the intense lessons found in this book and on the CD. Unfortunately the books and CDs included with the course were usually too expensive for aspiring engineers to purchase and were often available only in colleges, universities or school libraries. Now for the first time these indispensable training sessions are available with this release of *Critical Listening Skills for Audio Professionals*. Through hundreds of illustrations and an accompanying disc containing high resolution MP3 files with nearly five hours of narration of the entire course, you can acquire the audio discernment skills of a seasoned recording engineer by studying this course at your own pace in your own home. [Handbook for Sound Engineers](#) Glen Ballou, 2015-03-05 *Handbook for Sound Engineers* is the most comprehensive reference available for audio engineers and is a must read for all who work in audio. With contributions from many of the top professionals in the field including Glen Ballou on interpretation systems, intercoms, assistive listening and fundamentals and units of measurement; David Miles Huber on MIDI; Bill Whitlock on audio transformers and preamplifiers; Steve Dove on consoles, DAWs and computers; Pat Brown on fundamentals, gain structures and test and measurement; Ray Rayburn on virtual systems, digital interfacing and preamplifiers; Ken Pohlmann on compact discs and Dr Wolfgang Ahnert on computer aided sound system design and room acoustical fundamentals for auditoriums and concert halls, the *Handbook for Sound Engineers* is a must for serious audio and acoustic engineers. The fifth edition has been updated to reflect changes in the industry including added emphasis on increasingly prevalent technologies such as software based recording systems, digital recording using MP3, WAV files and mobile devices. New chapters such as Ken Pohlmann's *Subjective Methods for Evaluating Sound Quality*, S Benjamin Kanter's *Hearing Physiology Disorders*, Conservation Steve Barbar's *Surround Sound for Cinema*, Doug Jones's *Worship Styles in the Christian Church* sit aside completely revamped staples like Ron Baker and Jack Wrightson's *Stadiums and Outdoor Venues*, Pat Brown's *Sound System Design*, Bob Cordell's *Amplifier Design*, Hardy Martin's *Voice Evacuation Mass Notification Systems* and Tom Danley and Doug Jones's *Loudspeakers*. This edition has been honed to bring you the most up to date information in the many aspects of audio engineering. **Sound and Recording** Francis Rumsey, 2021-07-29 Providing vital reading for audio students and
