Woyseth, Nel Janssens**

Architectures Of Chance Architectures Of Chance:

Architectures of Chance Yeoryia Manolopoulou, 2017-03-02 Architectural discourse and practice are dominated by a false dichotomy between design and chance and governed by the belief that the architect's role is to defend against the indeterminate. In *Architectures of Chance* Yeoryia Manolopoulou challenges this position, arguing for the need to develop a more creative understanding of chance as aesthetic experience and critical method and as a design practice in its own right. Examining the role of experimental chance across film, psychoanalysis, philosophy, fine art, and performance, this is the first book to comprehensively discuss the idea of chance in architecture and bring a rich array of innovative practices of chance to the attention of architects. Wide-ranging and through a symbiotic interplay of drawing and text, *Architectures of Chance* makes illuminating reading for those interested in the process and experience of design and the poetics and ethics of chance and space in the overlapping fields of architecture and the aleatoric arts.

The Architecture of Chance Richard Lowry, 1989 Undergraduate textbooks for statistics courses in the behavioral, biological, and social sciences must devote so much space to the nuts and bolts details of statistical methods that they have little left over for the larger conceptual framework of probability theory. This brief, lucid book fills the gap with its intelligible and in-depth explanation of probability laid out step by step in a clear and congenial fashion. Even the student with little background in mathematics will find it readable and accessible.

Perspectives on Research Assessment in Architecture, Music and the Arts Fredrik Nilsson, Halina Dunin-Woyseth, Nel Janssens, 2017-02-03 Research in the creative fields of architecture, design, music, and the arts has experienced dynamic development for over two decades. The research in these practice- and arts-based fields has become increasingly mature but has also led to various discussions on what constitutes doctoral proficiency in these fields. The term 'doctorateness' is often used when referring to the assessment of the production of doctoral research and the research competence of research students, but in architecture and the arts the concept of doctorateness has not yet attained a clearly articulated definition. The assessment of quality has been practiced by way of supervising, mentoring, and the evaluation of dissertations but much less discussed. This book offers perspectives on how to qualify and assess research in architecture, music, and the arts. It creates a broader arena for discussion on doctorateness by establishing a framework for its application to creative fields. The book is grouped into three sections and includes contributions from international experts in the various fields working in Australia, Belgium, Brazil, Canada, Norway, Sweden, Switzerland, Spain, the Netherlands, and the UK. The first section offers general frameworks for further conceptualising doctorateness in the fields in question. It is followed by a section that describes and discusses various experiences, concerns, and visions on the production and assessment of doctoral research, reporting from doctoral programmes in different stages of development. The third section includes future-oriented perspectives on knowledge-building processes and asks how the ongoing profound changes in academia could influence the concept of quality in both doctoral process and product. The book presents different

perspectives on research assessment practices and developments of relevant criteria in the practice based and creative fields of architecture and the arts The contributions propose ways of framing this issue conceptually show the need for awareness of the specific context and tradition programmes develop and give proposals for various potential trajectories for the future

Digital Draw Connections Fabio Bianconi, Marco Filippucci, 2021-04-27 This book stems from the seminal work of Robert Venturi and aims at re projecting it in the current cultural debate by extending it to the scale of landscape and placing it in connection with representative issues It brings out the transdisciplinary synthesis of a necessarily interdisciplinary approach to the theme aimed at creating new models which are able to represent the complexity of a contradictory reality and to redefine the centrality of human dimension As such the volume gathers multiple experiences developed in different geographical areas which come into connection with the role of representation Composed of 43 chapters written by 81 authors from around the world with an introduction by Jim Venturi and Cezar Nicolescu the volume is divided into two parts the first one more theoretical and the other one which showcases real world applications although there is never a total split between criticism and operational experimentation of research
