Abrams, this text is a rigorous and eye-opening treatment filled with applications for a wide variety of scenarios in the valuation of your privately held business. Substantially revised for greater clarity and logical flow, the Second Edition includes new coverage of: Converting forecast net income to forecast cash flow; Damages in manufacturing firms; Regressing scaled variables as a way to control for heteroscedasticity; Mathematical derivation of the Price to Sales (P/S) ratio; Monte Carlo Simulation; MCS and Real Options; RO Analysis; Venture capital and angel investor rates of return; Lost inventory and lost profits; damage formulas in litigation. Organized into seven sections, the first three parts of this book follow the chronological sequence of performing a discounted cash flow. The fourth part puts it all together, covering empirical testing of Abrams valuation theory and measuring valuation uncertainty and error. Parts five to seven round it all out with discussion of litigation, valuing ESOPs and partnership buyouts, and probabilistic methods including valuing start-ups. The resulting work is solidly grounded in economic theory and including all necessary mathematics, integrates existing science into the valuation profession and develops valuation formulas and models that you will find useful on a daily basis.
