Business Process Simulation David Kelton:

Business Process Engineering D. Jack Elzinga, Thomas R. Gullledge, Chung-Yee Lee, 1999-01-31 Due to growing concern about the competitiveness of industry in the international marketplace and the efficiency of government enterprises widespread initiatives are currently underway to enhance the competitive posture of firms and to streamline government operations. Nearly all enterprises are engaged in assessing ways in which their productivity, product quality and operations can be improved. These efforts can be described as Business Process Engineering (BPE). BPE had its roots in industry under differing titles: Process Improvement, Process Simplification, Process Innovation, Reengineering, etc. It has matured to be an important ingredient of successful enterprises in the private and public sectors. After extensive exploitation by industrial and governmental practitioners and consultants, it is attracting increasing attention from academics in the fields of engineering and business. However, even with all of this attention in the popular literature, serious scholarly literature on BPE is in short supply. It is somewhat surprising, especially since so many large international organizations have attempted BPE projects with varied success.

Modeling a New Computer Framework for Managing Healthcare Organizations Soraia Oueida, 2020-08-27 The medical sector has been growing exponentially over the last decade and healthcare services are becoming more complex and costly. In order to continue efficiently and effectively managing patient safety, quality and the effectiveness of the healthcare systems, new methodologies are needed. This book provides a platform to address this growing need and to improve practice. With the introduction of a new computer platform package for the management of medical organizations and healthcare systems, *Modeling a New Computer Framework for Managing Healthcare Organizations* aims to improve management techniques and increase overall satisfaction scores of patients, owners and medical resources. The platform outlined will improve the daily operation of a healthcare system focusing on the emergency department and can be used to study the operation flow of a unit for performance optimization. It offers a user-friendly interface and proposed programming language along with a visual and simple practice to collect and understand statistical outputs. Essential reading for decision makers on different levels in the healthcare organization hierarchy, this book can also be used by management to improve the performance of the organization and decision makers to hire resources, enhance workflows or both. It guides designers and system implementers in a step-by-step approach to make optimal decisions for resource allocation and helps designers and management to detect deficiencies in ongoing processes and fix or enhance them. Soraia Oueida is an instructor in the Department of Computer Engineering at the American University of the Middle East. She is an IEEE member and her research interests include Simulation, Modeling, Discrete Mathematics, Petri Net, Workflows, Blockchain, IoT, Industrial Management Systems.
