Extensive coverage is given to tribology developments in office machines and in magnetic storage systems for computers. Monitoring sensors are addressed in the first chapter followed by chapters on specific monitoring techniques for automobiles, diesels and rotating machines. One chapter is devoted to procedures used for tracking the remaining life of lubricants. Synthetic lubricants are discussed by outstanding specialists in this rapidly developing field. Synthetics are increasingly important in widely diverse areas including compressors using the new ozone layer friendly refrigerants and a variety of extreme temperature and environmentally sensitive applications. Water and gas lubricated bearings are given similar attention. The contributors also develop a new unified coverage for fatigue life of ball and roller bearings for design and application of porous metal bearings for self contained lubrication involving oil rings, disks and wicks and for plastic bearings. Each of these classes of bearings are used by the millions daily throughout industry.
