**Instruments** Neville H. Fletcher, Thomas D. Rossing, 2013-11-09 When we wrote the first edition of this book we directed our presentation to the reader with a compelling interest in musical instruments who has a reasonable grasp of physics and who is not frightened by a little mathematics We are delighted to find how many such people there are The opportunity afforded by the preparation of this second edition has allowed us to bring our discussion up to date by including those new insights that have arisen from the work of many dedicated researchers over the past decade We have also taken the opportunity to revise our presentation of some aspects of the subject to make it more general and we hope more immediately accessible We have of course corrected any errors that have come to our attention and we express our thanks to those friends who pointed out such defects in the early printings of the first edition We hope that this book will continue to serve as a guide both to those undertaking research in the field and to those who simply have a deep interest in the subject June 1991 N H F and T D R

**Physics** Val Dusek, 1999 While many books have claimed parallels between modern physics and Eastern philosophy none have dealt with the historical influences of both Chinese traditional thought and non mechanistic holistic western thought on the philosophies of the scientists who developed electromagnetic field theory In The Holistic Inspirations of Physics R Valentine Dusek asks to what extent is classical field theory a product of organic and holistic philosophies and frameworks Electromagnetic theory has been greatly influenced by holistic worldviews Dusek posits and he highlights three alternative scientific systems that made the development of electromagnetic theory possible medieval Chinese science Western Renaissance occultism and the German romantic traditions He situates these alternative approaches in their social context and background and traces their connection with components of accepted physical science in relation to a number of social

movements and philosophical theories Readers will learn of specific contributions made by these alternative traditions such as the Chinese inventing the compass and discovering the earth's magnetic field and magnetic declination Western alchemical ideas of active forces and occult influences contributed to Newton's theory of gravitation force as action at a distance rather as a result of purely mechanical collisions and contact action Dusek also describes the extent to which women's culture supplied often without credit the philosophical background ideas that were absorbed into mainstream field theory
