Behavior Of Marine Fishes Capture Processes And Conservation Challenges:

Behavior of Marine Fishes Pingguo He, 2011-06-09 BEHAVIOR OF MARINE FISHES BEHAVIOR OF MARINE FISHES Capture Processes and Conservation Challenges Understanding fish behavior in relation to capture processes in marine fisheries is of fundamental importance to reducing bycatch and discards and to enhancing marine fisheries conservation efforts A thorough understanding of this allows commercial fishers to more effectively capture target species while reducing the catch of unwanted species Behavior of Marine Fishes Capture Processes and Conservation Challenges provides the reader with principles patterns and characteristics on fish behavior and fish capture processes using several types of important commercial fishing gears The book also highlights conservation challenges facing the marine capture fisheries in efforts to maintain sustainable use of marine resources and to reduce negative impacts to the marine ecosystem This volume with contributions from leading applied fish behaviorists and fishing gear technologists from around the world will be a valuable reference for researchers fishing gear technologists fisheries managers students and conservationists SPECIAL FEATURES Synthesis of current research and valuable knowledge that will help reduce bycatch and discards in commercial fisheries Review of basic fish behavioral principles and patterns and their relation to capture methods and conservation efforts Contributions from leading international applied fish behaviorists and fishing gear technologists **Behavior of Marine Fishes** Pingguo He, 2010-06-16 Understanding fish behavior in relation to capture processes in marine fisheries is of fundamental importance to reducing bycatch and discards and to enhancing marine fisheries conservation efforts A thorough understanding of this allows commercial fishers to more effectively capture target species while reducing the catch of unwanted species Behavior of Marine Fishes Capture Processes and Conservation Challenges provides the reader with principles patterns and characteristics on fish behavior and fish capture processes using several types of important commercial fishing gears The book also highlights conservation challenges facing the marine capture fisheries in efforts to maintain sustainable use of marine resources and to reduce negative impacts to the marine ecosystem This volume with contributions from leading applied fish behaviorists and fishing gear technologists from around the world will be a valuable reference for researchers fishing gear technologists fisheries managers students and conservationists *The European Landing Obligation* Sven Sebastian Uhlmann, Clara Ulrich, Steven J. Kennelly, 2018-12-19 This open access book provides a comprehensive examination of the European Landing Obligation policy from many relevant perspectives It includes evaluations of its impacts at economical socio cultural ecological and institutional levels It also discusses the feasibility and benefits of several potential mitigation strategies The book was timely published exactly at the time where the Landing Obligation was planned to be fully implemented This book is of significant interest to all stakeholders involved but also to the general public of Europe and to other jurisdictions throughout the world that are also searching for ways to deal with by catch and discard issues Conservation Physiology for the Anthropocene - A Systems Approach , 2022-10-21 Conservation

Physiology for the Anthropocene A Systems Approach Volume 39A in the Fish Physiology series is a comprehensive synthesis on the physiology of fish in the Anthropocene This volume closes the knowledge gap by considering the many ways in which different physiological systems e g sensory physiology endocrine cardio respiratory bioenergetics water and ionic balance and homeostasis locomotion biomechanics gene function and physiological diversity are relevant to management and conservation As the world is changing with a dire need to identify solutions to the many environmental problems facing wild fish populations this book comprehensively covers conservation physiology and its future techniques Conservation physiology reveals the many ways in which environmental change and human activities can negatively influence wild fish populations These tactics inform new management and conservation activities and help create the necessary conditions for fish to thrive Presents authoritative contributions from an international board of authors each with extensive expertise in the conservation physiology of fish Provides the most up to date information on the ways in which different physiological systems are relevant to the management and conservation of fish and fisheries Identifies how anthropogenic stressors perturb physiological systems Explores how different physiological systems can be exploited to solve conservation problems

Classification and illustrated definition of fishing gears Food and Agriculture Organization of the United Nations,2021-07-02 This document elaborates the revised International Standard Statistical Classification of Fishing Gear ISSCFG as endorsed and adopted for implementation by the FAO Coordinating Working Party on Fishery Statistics CWP at its Twenty fifth Session in February 2016 in Rome Italy The classification applies to commercial subsistence and recreational fisheries in marine and freshwater fisheries The document provides definitions and illustrations of the configuration and mode of operation of typical fishing gears The primary purpose is to assist FAO Members regional fishery bodies as well as those working on fishery statistics and management to correctly attribute and report fisheries catches made by different gear types The document also contributes to the prevention deterrence and elimination of illegal unreported and unregulated IUU fishing by providing monitoring control and surveillance personnel with information to identify the type of fishing gear with regard to licence and authorization to carry out fishing operations Finally the document also provides context and references for some contemporary conservation issues related to major fishing gear types it can therefore be used as a reference text for students and researchers in fisheries and marine conservation

Performance assessment of bycatch and discards governance by regional fisheries management organizations , The Welfare of Fish Tore S. Kristiansen,Anders Fernö,Michail A. Pavlidis,Hans van de Vis,2020-07-01 This book investigates how fish experience their lives their amazing senses and abilities and how human actions impact their quality of life The authors examine the concept of fish welfare and the scientific knowledge behind the inclusion of fish within the moral circle and how this knowledge can change the way we treat fish in the future In many countries fish are already protected by animal welfare legislation in the same way as mammals but in practice there is still a major gap between how we ethically view these groups and how we actually treat them The poor

treatment of fish represents a massive animal welfare problem in aquaculture and fisheries both in terms of the number of animals affected and the severity of the welfare issues Thanks to its interdisciplinary scope this thought provoking book appeals to professionals academics and students in the fields of animal welfare cognition and physiology as well as fisheries and aquaculture management

A third assessment of global marine fisheries discards Food and Agriculture Organization of the United Nations, 2019-02-19 This third update of FAO's global discard estimate adopted the fishery by fishery approach employed in the second discards assessment published in 2005 The update included publicly available discard data in the last 20 years to establish a baseline of a time series of global marine fisheries discards This is essential for monitoring the status and trends of discard management which is the first step of the ecosystem approach to fisheries management cycle In addition the study developed a new fisheries data table incorporating landings data from the FAO Global Capture Production dataset FishStat J from 2010 to 2014 which allocated the landings to over 2 000 fisheries worldwide The current study estimated that the annual discards from global marine capture fisheries between 2010 and 2014 was 9.1 million tonnes 95% CI 6.7–16.1 million tonnes About 46 percent 4.2 million tonnes of total annual discards were from bottom trawls that included otter trawls shrimp trawls pair bottom trawls twin otter trawls and beam trawls The study included a synthesis of estimates of bycatch and discards of endangered threatened and protected ETP species Substantial advances have been made in quantifying fisheries interactions with such species so as to make informed decisions on their protection However many challenges remain especially for small scale fisheries The development of standardized data collection techniques risk based sampling and sharing of data across agencies and regions will help to identify management priorities and allow implementation and enforcement of mitigation measures A review of previous research showed that discard practices were often related to a wide range of factors so it is difficult to assess the effectiveness of fishery management actions on the amount and practice of discards Many regulations are inconsistently enforced and their implementation is often less strict than intended Piecemeal approaches in many bycatch and discards management measures can result in unintended cross taxa conflicts where regulations designed to reduce bycatch and or discards of one species or species group may increase bycatch and or discards of another Examination of approaches to accounting for and mitigating against pre catch post capture and ghost fishing mortalities demonstrates that an understanding of the relative importance of factors affecting indirect fishing mortality is necessary for estimating total fishing induced mortality and for designing and implementing mitigation measures

Handbook of Marine Fisheries Conservation and Management R. Quentin Grafton, Ray Hilborn, Dale Squires, Maree Tait, Meryl Williams, 2010-01-21 This handbook is the most comprehensive and interdisciplinary work on marine conservation and fisheries management ever compiled It is the first to bridge fisheries and marine conservation issues Its innovative ideas detailed case studies and governance framework provide a global special perspective over time and treat problems in the high seas community fisheries industrial fishing and the many interactions

between use and non use of the oceans Its policy tools and ideas for overcoming the perennial problems of over fishing habitat and biodiversity loss address the facts that many marine ecosystems are in decline and plagued by overexploitation due to unsustainable fishing practices An outstanding feature of the book is the detailed case studies on conservation practice and fisheries management from around the world These case studies are combined with foundation chapters that provide an overview of the state of the marine world and innovative and far reaching perspectives about how we can move forward to face present and future challenges The contributors include the world s leading fisheries scientists economists and managers Ecosystem and incentive based approaches are described and complemented by tools for cooperative participatory solutions Unique themes treated fisher behavior and incentives for management beyond rights based approaches a synthesis of proposed solutions a framework for understanding and overcoming the critical determinants of the decline in fisheries degradation of marine ecosystems and poor socio economic performance of many fishing communities models for innovative policy instruments a plan of action and adoption pathways to promote sustainable fishing practices globally Collectively the handbook s many valuable contributions offer a way forward to both understanding and resolving the multifaceted problems facing the world s oceans

Review of the techno-economic performance of the main global fishing fleets Van Anrooy, R., Carvalho, N., Kitts, A., Mukherjee, R., Van Eijs, S., Japp, D., Ndao, S., 2021-06-11 This review of the techno economic performance of the main global fishing fleets discusses the outcomes from 20 country level studies of fishing fleets from Africa Asia Europe North and South America It includes financial socio economic and technical information from 103 major semi industrial fishing fleet segments which are responsible for an estimated 39 percent of marine capture fisheries production worldwide The analysis of vessel characteristics reveals substantial differences in fishing capacity in terms of vessel length tonnage and power between fleet segments An increase in the gross tonnage of average vessels was observed in fleet segments also covered in previous reviews Substantial increases in average length overall and engine power were observed in several Asian fishing fleets The age structure of the fishing fleets in most regions except Asia shows an upward trend An analysis of the costs and earnings data showed that labour and running costs were the two main cost components for the majority of fleet segments Ninety two percent of 97 fleet segments reported a positive net cash flow in the year they were surveyed in the 2016 2019 period Net profit margins of 10 percent or more were realized by average fishing vessels in 73 percent of the fleet segments Returns on investment ROIs of 10 percent or higher were realized by 61 percent of the fleet segments The review also discusses developments in fishing technologies These developments along with a general increase in seafood prices successful fisheries management in some areas and improved fleet capacity management in Europe and North America have all contributed to the ongoing positive financial and economic performance of the main global fishing fleets in recent years
