Evolutionary Psychology Lance Workman, Will Reader, 2021-05-20 While evolutionary psychology is a fascinating science it is also often misunderstood In this highly acclaimed undergraduate textbook Workman and Reader assume no prior knowledge of evolution and instead carefully guide students towards a level of understanding where they can critically apply evolutionary theory to psychological explanation The authors provide an engaging and balanced discussion of evolutionary psychology without committing to a specific school of thought and organise chapters around topics familiar to psychology students Retaining the successful structure and pedagogy of previous editions the text has been updated to include the latest advances in the field with new material added on homosexuality a consideration of feminist criticism grandparental investment and developments in neuroscience and epigenetics The fourth edition is now in full colour with new figures and photographs revised boxed case studies additional discussion questions and an updated online test bank

Naturalized Epistemology and Philosophy of Science Chienkuo Mi, Ruey-lin Chen, 2007 Much has happened in the field of contemporary epistemology since Quine's *Epistemology Naturalized* was published in 1969 Even before Ronald Giere published his article *Philosophy of Science Naturalized* naturalized philosophy of science had been influenced by the so called historical approach Kuhn Lakatos Feyerabend and Laudan all contributed importantly to this trend In this light it has emerged without a doubt that philosophy of science is closely related to epistemology This volume explores some of the relevant relations and will be of interest to epistemologists and philosophers of science **Terra** Michael

Novacek, 2025-10-16 A paleontologist awakens us to the extinction event that human activity is bringing about today The natural world as humans have always known it evolved close to 100 million years ago with the appearance of flowering plants

and pollinating insects during the age of the dinosaurs Its tremendous history is now in danger of profound catastrophic disruption In *Terra* a brilliant synthesis of evolutionary biology paleontology and modern environmental science Michael Novacek shows how all three can help us understand and prevent what he and others call today's mass extinction event Humanity's use of land our consumption the pollution we create and our contributions to global warming are causing this crisis True the fossil record of hundreds of millions of years reveals that wild and bounteous nature has always evolved not quietly but thunderously as species arise flourish die off and are replaced by new species We learn from paleontology and archaeology that for 50 000 years human hunting mining and agriculture have changed many localities sometimes irrevocably But today Novacek insists our behavior endangers the entire global ecosystem And if we disregard through ignorance antipathy or apathy the theory of evolution that developed with our modern understanding of the Earth's past we not only impede enlightenment but threaten any practical strategy for our own survival The evolutionary future of the entire living planet depends on our understanding this
