Artificial Intelligence And Hybrid Systems:

Artificial Intelligence and Hybrid Systems Claudio Rocha (umetna inteligencia.), Fernando Akune, Ahmed El-Shafie, 2013

Hybrid Information Systems Ramakant Bhardwaj, Pushan Kumar Dutta, Pethuru Raj, Abhishek Kumar, Kavita Saini, Alfonso González Briones, Mohammed K.A. Kaabar, 2024-07-22 The book provides comprehensive and cognitive approach to building and deploying sophisticated information systems The book utilizes non linear optimization techniques fuzzy logic and rough sets to model various real world use cases for the digital era The hybrid information system modeling handles both qualitative and quantitative data and can effectively handle uncertainty and imprecision in the data The combination of non linear optimization mechanisms fuzzy logic and rough sets provides a robust foundation for next generation information systems that can fulfill the demands of adaptive aware and adroit software applications for the knowledge era The book emphasizes the importance of the hybrid approach which combines the strengths of both mathematical and AI techniques to achieve a more comprehensive and effective modeling process Hybrid information system modeling techniques combine different approaches such as fuzzy logic rough sets and neural networks to create models that can handle the complexity and uncertainty of real world problems These techniques provide a powerful tool for modeling and analyzing complex systems and the applications of hybrid information system modeling demonstrate their potential for solving real world problems in various fields

Artificial Intelligence and Hybrid Systems Claudio Rocha, Fernando Akune, Ahmed El-Shafie, 2013-07-17 The use of artificial intelligence and hybrid systems has increased dramatically due to their ability in handling real world problems involving uncertainty vagueness and high complexity The development of these systems has attracted the interest of the Artificial Intelligence community and established as a promising field of research In order to present the ideas and practices of the hybridization process of intelligent systems in this book we included some recent and interesting studies on this topic Chapter 1 thoroughly analyzes the behaviors of perceptron including solution space for every possible patterns and convergence trajectories toward solutions as well as briefly discusses the behaviors of multiple perceptrons In Chapter 2 accurate as well as efficient non invasive computational intelligence approaches different artificial neural network models and a Sugeno type fuzzy logic inference system are implemented for the classification of two phase flow in boiling water reactors Chapter 3 contains a nice compilation of indifference zone selection procedures as they apply to reliability analysis many of those results come from the authors own research Chapter 4 discusses the software project design with the implementation of product line concepts to meet the customers demands for the production of high quality software applications in shortest possible time within low budget and using less number of resources Chapter 5 proposes integration of deterministic and probabilistic for improvement of human reliability analysis The operator action success criteria time windows needed for human reliability analysis were determined through deterministic safety analysis Chapter 6 presents a scheme to produce Network Anomaly Detection models based on Evolutionary Computation The models

are Hidden Markov Models produced automatically with no human intervention Chapter 7 proposes an integrated online system which ranks the relational data A compressed data structure is introduced to encode the dominant relationship of the data Efficient querying strategies and updating scheme are devised to facilitate the ranking process Chapter 8 proposes a method to combine the output of dependency parsers trained with the same parser generator but with specifically selected corpora Chapter 9 proposes a new optimization model for the unit commitment problem using a stochastic hybrid algorithm combining simulated annealing and evolutionary algorithm Chapter 10 develops neural network NN models to predict 85th percentile speed for two lane rural highways in Oklahoma Several input parameters namely physical characteristics of road traffic parameters pavement condition indices and accident data were considered in developing the models In Chapter 11 a comparative study between micro controller and computer for various network types is given and an implementation of the a Radial Basis Function RBF network on the low end and inexpensive micro controller is proposed Chapter 12 provides an improved and updated survey of the recent researches and patents which concern about statistical background modeling and subtraction Chapter 13 offers an outline of the hybrid approach the design methodology of the INVENTS system as well as its structure and user interface In Chapter 14 it presents and discusses applications of the artificial neural network approach for improving equivalent circuit based transistor noise models in terms of the accuracy and the range of validity Chapter 15 presents a simple yet efficient approach to improve IR on the web by reusing the information contained in the past user queries as the expansion for the initial query

Hybrid Intelligent Systems Larry R. Medsker, 2012-12-06 Hybrid Intelligent Systems summarizes the strengths and weaknesses of five intelligent technologies fuzzy logic genetic algorithms case based reasoning neural networks and expert systems reviewing the status and significance of research into their integration Engineering and scientific examples and case studies are used to illustrate principles and application development techniques The reader will gain a clear idea of the current status of hybrid intelligent systems and discover how to choose and develop appropriate applications The book is based on a thorough literature search of recent publications on research and development in hybrid intelligent systems the resulting 50 page reference section of the book is invaluable The book starts with a summary of the five major intelligent technologies and of the issues in and current status of research into them Each subsequent chapter presents a detailed discussion of a different combination of intelligent technologies along with examples and case studies Four chapters contain detailed case studies of working hybrid systems The book enables the reader to Describe the important concepts strengths and limitations of each technology Recognize and analyze potential problems with the application of hybrid systems Choose appropriate hybrid intelligent solutions Understand how applications are designed with any of the approaches covered Choose appropriate commercial development shells or tools An invaluable reference source for those who wish to apply intelligent systems techniques to their own problems

Hybrid Architectures for Intelligent Systems Abraham Kandel, Gideon Langholz, 1992-02-21 Hybrid architecture for intelligent

systems is a new field of artificial intelligence concerned with the development of the next generation of intelligent systems. This volume is the first book to delineate current research interests in hybrid architectures for intelligent systems. The book is divided into two parts. The first part is devoted to the theory, methodologies and algorithms of intelligent hybrid systems. The second part examines current applications of intelligent hybrid systems in areas such as data analysis, pattern classification and recognition, intelligent robot control, medical diagnosis, architecture, wastewater treatment and flexible manufacturing systems. *Hybrid Architectures for Intelligent Systems* is an important reference for computer scientists and electrical engineers involved with artificial intelligence, neural networks, parallel processing, robotics and systems architecture. *Artificial Intelligence Applications and Innovations* Ilias Maglogiannis, John Macintyre, Lazaros Iliadis, 2021-06-22. This book constitutes the refereed proceedings of the 17th IFIP WG 12.5 International Conference on Artificial Intelligence Applications and Innovations AIAI 2021 held virtually and in Hersonissos, Crete, Greece in June 2021. The 50 full papers and 11 short papers presented were carefully reviewed and selected from 113 submissions. They cover a broad range of topics related to technical, legal and ethical aspects of artificial intelligence systems and their applications and are organized in the following sections: adaptive modeling, neuroscience, AI in biomedical applications, AI impacts, big data, automated machine learning, autonomous agents, clustering, convolutional NN, data mining, word counts, deep learning, fuzzy modeling, hyperdimensional computing, Internet of Things, Internet of energy, machine learning, multi-agent systems, natural language, recommendation systems, sentiment analysis and smart blockchain applications, cybersecurity. Advances in Artificial Intelligence-Empowered Decision Support Systems George A. Tsihrintzis, Maria Virvou, Haris Doukas, Lakhmi C. Jain, 2024-06-27. Decision Support Systems (DSSs) are Software and Information Systems which make use of various data and business models, employ advanced data analytics procedures and access extensive databases and data warehouses to facilitate with a decision process or with organizational issues. DSSs have proven to be particularly useful at the strategic level while they usually require only limited computer proficiency skills from their users. Although DSSs have been under development and use for several decades, recent advances in both Software Engineering technologies and Artificial Intelligence (AI) methodologies have heralded new avenues for research and development in this field. This book exposes its readers to some of the most significant Advances in Artificial Intelligence Empowered Decision Support Systems. It consists of an editorial note and an additional sixteen (16) chapters all invited from authors who work on the corresponding chapter theme and are recognized for their significant research contributions. The chapters are organized into five parts, namely: i) AI Empowered DSS in Medical Diagnosis and Biology; ii) AI Empowered DSS in Healthcare and Health Insurance; iii) AI Empowered DSS in Urban Matters; iv) Various Applications of AI Empowered DSS; and v) Novel AI Empowered

Methodologies in Decision Making Targeted toward academics researchers practitioners and students in Computer Science Artificial Intelligence and Management this book is also accessible to individuals from other disciplines interested in the cutting edge developments of AI empowered DSS technologies An extensive list of bibliographic references at the end of each chapter guides the readers to probe deeper into the application areas of interest to them **Artificial Intelligence**
