Biophysical Characterization of Proteins in Developing Biopharmaceuticals Damian J. Houde, Steven A.

Berkowitz, 2019-11-13 *Biophysical Characterization of Proteins in Developing Biopharmaceuticals* Second Edition presents the latest on the analysis and characterization of the higher order structure HOS or conformation of protein based drugs Starting from the very basics of protein structure this book explains the best way to achieve this goal using key methods commonly employed in the biopharmaceutical industry This book will help today s industrial scientists plan a career in this industry and successfully implement these biophysical methodologies This updated edition has been fully revised with new chapters focusing on the use of chromatography and electrophoresis and the biophysical characterization of very large biopharmaceuticals In addition best practices of applying statistical analysis to biophysical characterization data is included along with practical issues associated with the concept of a biopharmaceutical s developability and the technical decision making process needed when dealing with biophysical characterization data Presents basic protein characterization methods and tools applicable to bio pharmaceutical research and development Highlights the capabilities and limitations of each technique Discusses the underlining science of each tool Empowers industrial biophysical chemists by providing a roadmap for applying biophysical tools Outlines the needs for new characterization and analytical tools in the biopharmaceutical industry Biosimilar Drug Product Development Laszlo Endrenyi, Dr. Paul Declerck, Shein-Chung Chow, 2017-02-24 When a biological drug patent expires alternative biosimilar products are developed The development of biosimilar products is complicated and involves numerous considerations and steps The assessment of biosimilarity and interchangeability is also complicated and difficult *Biosimilar Drug Product Development* presents current issues for the development of biosimilars and gives detailed reviews of its various stages and contributing factors as well as relevant regulatory pathways and pre and post approval issues *Hydrogen Exchange Mass Spectrometry of Proteins* David D. Weis, 2016-01-12 Hydrogen exchange mass spectrometry is widely recognized for its ability to probe the structure and dynamics of proteins The application of this technique is becoming widespread due to its versatility for providing structural information about challenging biological macromolecules such as antibodies flexible proteins and glycoproteins Although the technique has been around for 25 years this is the first definitive book devoted entirely to the topic *Hydrogen Exchange Mass Spectrometry of Proteins* Fundamentals Methods and Applications brings into one comprehensive volume the theory instrumentation and applications of Hydrogen Exchange Mass Spectrometry HX MS a technique relevant to bioanalytical chemistry protein science and pharmaceuticals The book provides a solid foundation in the basics of the technique and data interpretation to inform readers of current research in the method and provides illustrative examples of its use in bio and pharmaceutical chemistry and biophysics In depth chapters on the fundamental theory of hydrogen exchange and tutorial chapters on measurement and data analysis provide the essential background for those ready to adopt HX MS Expert users may advance their current

understanding through chapters on methods including membrane protein analysis alternative proteases millisecond hydrogen exchange top down mass spectrometry histidine exchange and method validation All readers can explore the diversity of HX MS applications in areas such as ligand binding membrane proteins drug discovery therapeutic protein formulation biocomparability and intrinsically disordered proteins

Dispersity, Structure and Phase Changes of Proteins and Bio Agglomerates in Biotechnological Processes Arno Kwade,Ingo Kampen,2024-09-26 This book serves as a comprehensive summary of the priority program SPP 1934 which focused on understanding the dispersity structure and phase changes of proteins and bio agglomerates in biotechnological processes Through contributions from various research groups the program explored how sensitive proteins and bio agglomerates are affected by the process environment during fermentation downstream processing and formulation It investigated these effects across three size scales microscale encompassing single proteins clusters crystals and virus like particles mesoscale focusing on cells and cell clusters and macroscale examining overall process dynamics The main objective was to enhance biotechnological process chains by elucidating the mechanical thermal and chemical stresses that impact protein and bio agglomerate structures By gaining insights into these stressors the program aimed to enable precise control measures to mitigate denaturation and unfavorable growth of proteins and cells This compilation seeks to contribute to the optimization of biotechnological processes facilitating advancements in various industries

Advances in Root Vegetables Research Prashant Kaushik,2023-02-15 Root vegetables are the sections of underground plants that are harvested and consumed by humans for their nutritional value They are found in a wide variety of plant species Even though botany draws a distinction between real roots and non roots the term root vegetable refers to both kinds in the context of agriculture and cuisine despite botany classifying genuine roots as separate from non roots Root vegetables are often storage organs that store energy in the form of carbohydrates This book explores recent developments in root vegetable research against the background of current and impending environmental change

Mass Spectrometry in Biopharmaceutical Analysis Igor A. Kaltashov,Shunhai Wang,Guanbo Wang,2021-11-22 Biopharmaceuticals are a unique class of compounds due to their extreme structural complexity The current text puts together a variety of the state of the art approaches that use mass spectrometry to evaluate various aspects of biopharmaceutical products ranging from monitoring stress related structural changes to their quantitation in pharmacokinetic studies
