

## Worksheets 1.4A–C

### An investigation using hydrogencarbonate indicator

- 1 To allow the gases to move from the organisms to the indicator, but stopped the organisms from falling into the indicator.
- 2 To make sure that gases produced by the organisms stayed inside the tube, where they would affect the indicator.
- 3 Any two from: the size and shape of the test tube; the volume of hydrogencarbonate indicator; the height of the platform above the indicator; the mass of the organisms or beads used in each tube.
- 4 For example:

| Tube | Contents               | Colour of indicator at start | Final colour of indicator |
|------|------------------------|------------------------------|---------------------------|
| A    | live maggots           | red                          | yellow                    |
| B    | dead seeds             | red                          | red                       |
| C    | live germinating seeds | red                          | yellow                    |
| D    | plastic beads          | red                          | red                       |

#### For Worksheet 1.4A

- 5 A and C
- 6 They contained living organisms, which respired and produced carbon dioxide.

#### For Worksheet 1.4B

- 5 The indicator in tubes A and C went yellow, showing that a lot of carbon dioxide was present. This was produced by the organisms in these test tubes, which respired. There was no respiration in tubes B or D, so the indicator stayed red because there was no carbon dioxide produced.
