Bioreactor Immobilized Enzymes and Cells Murray Moo-Young, 1988-01-11 Immobilized Biosystems I.A. Veliky, R.J.C. McLean, 2012-12-06 This book provides an overview of the immobilization of viable and non viable cells proteins enzymes and active molecules and their interaction with natural or synthetic carriers for performing biochemical and chemical reactions in vivo and in vitro *Interfacial Phenomena and Bioproducts* John Brash, 1996-08-16 Presents a synopsis of the theoretical principles and practical experience concerning the interfacial behaviour of bioproducts The volume offers an interdisciplinary approach to the subject that highlights the importance of interfacial phenomena in bioprocessing systems and the tools used to study and interpret the phenomena It contains coverage ranging from fundamentals of bioproduct and solid surface structure to the interactions of multicomponent mixtures in heterogeneous *Multiphase Bioreactor Design* Joaquim M.S. Cabral, Manuel Mota, Johannes Tramper, 2001-09-20 Bioreaction engineering is fundamental to the optimization of biotechnological processes and the production of biochemicals by enzymes microbial plant and animal cells and higher organisms A reference text for postgraduate students and researchers in biochemical engineering and bioreactor design *Multiphase Bioreactor Design* describes the **Microbial Enzymes and Biotechnology** W.M. Fogarty, C.T. Kelly, 2012-12-06 Biotechnology is now one of the major growth areas in science and engineering and within this broad discipline enzyme technology is one of the areas earmarked for special and significant developments This publication is the second edition of *Microbial Enzymes and Biotechnology* which was originally published in 1983 In this edition the editors have attempted to bring together accounts by the relevant experts of the current status of the major areas of enzyme technology and specifically those areas of actual and or potential commercial importance Although the use of microbial enzymes may not have expanded at quite the rate expected a decade ago there is nevertheless intense activity and considerable interest in the whole area of enzyme technology Microbial enzymes have been used in industry for many centuries although it is only comparatively recently that detailed knowledge relating to their nature properties and function has become more evident Developments in the 1960s gave a major thrust to the use of microbial enzymes in industry The commercial success of alkaline proteases and amyloglucosidases formed a bed rock for subsequent research and development in the area **Biological Resource Management Connecting Science and Policy** Ervin Balazs, Ennio Galante, James M. Lynch, James S. Schepers, Jean-Pierre Toutant, Dietrich Werner, P.A.T.J. Werry, 2013-03-14 Jointly published with INRA Paris The application of new production methods in the food industry genetic engineering in plants and animals as well as recent crises over food borne diseases have led consumers to a growing concern about science as an appropriate basis for developing sound agricultural policies This book presents the discussion of scientists and politicians in the framework of an OECD programme conference on how to restore public trust in the application of new scientific achievements concerning food production Enzymes in the Environment Richard G. Burns, Richard P. Dick, 2002-01-29 The

need to understand the biological processes that are important for essential aquatic and terrestrial ecosystem function has prompted much research into the field of ecological enzymology This book presents the two broad areas of application in a compilation of reviews by 21 international experts in their respective fields The first explores enzymatic activities to assess the processes or mechanisms that operate in a given system such as the rhizosphere plant leaves and shoots soil surfaces and biofilms The second considers enzymes or microbial cells as sensors to detect microbial activity and stresses due to pollution management or climatic change in both aquatic and terrestrial ecosystems

Cell Encapsulation Technology and Therapeutics Willem M. Kühtreiber, Robert P. Lanza, William L. Chick, 2013-12-01 The concept of using encapsulation for the immunoprotection of transplanted cells was introduced for the first time in the 1960s Microencapsulated cells might be protected from destruction and from participation in immunological processes while the enclosing membrane would be permeable to small molecules of specific cellular product which could then enter the general extracellular compartment of the recipient For instance encapsulated endocrine cells might survive and maintain an effective supply of hormone Chang Ph D Thesis McGill University 1965 Chang et al Can J Physiol Pharmacol 44 115 128 1966 We asked Connaught Laboratories Ltd in Toronto to put this concept into practice In 1980 Lim and Sun from Connaught Laboratories reported on the successful implantation of poly I lysine alginate encapsulated rat islets into a foreign host Lim and Sun Science 210 908 909 1980 Now many groups around the world are making tremendous progress in the encapsulation of a multitude of cell types Kühtreiber Lanza and Chick have invited many cell encapsulation groups from around the world to contribute to this book The result is a very useful reference book in this rapidly growing area With so many excellent authors describing in detail the different areas of cell encapsulation my role here will be to briefly discuss a few points

Stability and Stabilization of Biocatalysts F.J. Plou, J.L. Iborra, P.J. Bioremediation of Contaminated Soils Donald L. Wise, 2000-06-09 This volume focuses on innovative bioremediation techniques and applications for the cleanup of contaminated media and sites It includes quantitative and design methods that elucidate the relationships among various operational parameters and waste chemistry that defines the cost effectiveness of bioremediation projects It also presents numerical models
